REPORT
OF THE
SECRETARY OF INTERNAL AFFAIRS.

COMMUNICATION.

DEPARTMENT OF INTERNAL AFFAIRS,
HARRISBURG, *December 1, 1883.*

To His Excellency, ROBERT E. PATTISON,
Governor of Pennsylvania:

In compliance with the requirements of the Constitution, I have the honor to present you herewith, for transmission to the General Assembly, reports of this Department for the year ending with the 30th ultimo, as follow:

Part I. Land-Office.

Part II. Assessments.

I am, very respectfully,

Your obedient servant,

J. SIMPSON AFRICA,
Secretary of Internal Affairs.

PART I.---LAND-OFFICE.

REPORT.

Money Received.

During the fiscal year ending with the 30th day of November, 1883, there was received in this Department, and paid into the State Treasury, in connection with business in the land-office, the sum of \$7,507 74. Of this amount, \$4,041 17 was for purchase money for lands and interest thereon; \$1,115 82 for warrant and patent fees; and \$2,350 75 fees received for copies of warrants, surveys, patents, and other documents, as will appear in the appended detailed statement.

Business Performed.

In compliance with the requirements of the acts of Assembly, approved, respectively, the 2d day of April, 1811, and the 31st day of March, 1812, the following accounts, in detail, of the money received and business performed in the Department, during the last fiscal year, have been prepared.

STATEMENT

Showing the number of warrants, patents, and certificates to the State Treasurer, issued from December 1, 1882, to November 30, 1883, both days included, with the amount of purchase money, and fees for warrants, patents, &c.; also, copying fees received during the same period:

MONTH AND YEAR.	New warrants.	Patents paid for.	Excess tickets.	Certificates to State Treasurer.	Purchase money.	Warrant and patent fees.	Copying fees.	Totals.
1882, December, .	5	4	1	10	\$218 66	\$55 00	\$134 75	\$408 41
1883, January, . .	7	4	. . .	11	99 57	85 00	213 50	398 07

Recapitulation.

Purchase money,	\$4,041 17
Warrant and patent fees,	\$1,115 82
Copying fees,	2,350 75
	<u>3,466 57</u>
Total amount paid into State Treasury,	<u>\$7,507 74</u>

DETAILED STATEMENT*Of fees received for the year ending November 30, 1883.*

995 copies of surveys,	\$995 00
303 copies of patents,	303 00
306 copies of warrants,	153 00
123 searches,	30 75
129 connections, embracing 768 tracts,	576 00
71 copies of applications, and 178 miscellaneous copies,	207 75
72 warrants issued,	360 00
Patent fees, including warrants of acceptance, and other fees,	841 07
Total,	<u>\$3,466 57</u>

**RESUME OF BUSINESS OF THE DEPARTMENT FOR THE YEAR ENDING
NOVEMBER 30, 1883.****Letters Received and Answered.**

3,450 relative to land-office business.
 1,150 relative to industrial statistics.
 00 relative to railroads and assessments.

Reports, Blanks, and Circulars Forwarded.

1,750 relative to land-office business.
 9,500 relative to industrial statistics.
 2,000 relative to railroads and assessments.

Land-Office.

2,115 copies of original papers certified and issued under the seal of the Department.
 3,500 searches for warrants and surveys, required for patenting, copying, and connections, and refiling the same.
 2,236 entries in fee-book, transcribing the same quarterly for settlement with the Auditor General.
 4 quarterly returns to Auditor General.
 105 applications for warrants received and entered on register.
 64 applications for patents received and entered on register.
 105 applications for warrants indorsed and filed.
 64 applications for patents indorsed and filed.
 72 tickets issued for warrants.
 38 tickets issued for excess.
 66 tickets issued for patents.
 1 ticket issued for lien.
 72 new warrants issued, recorded, registered, numbered, and filed.

- 72 new warrants issued and directed to county surveyors for execution.
- 3 warrants to accept surveys issued, registered, numbered, and filed.
- 46 new surveys from county surveyors, calculated and compared with warrants.
- 46 new surveys entered on surveyors' lists of returns, numbered and filed.
- 8 new surveys containing an excess of land calculated, compared with warrants, and placed in excess files.
- 17 new surveys calculated, compared with warrants, and returned to county surveyors for correction.
- 69 entries on warrants or applications of the time of patenting.
- 69 indorsements on surveys of the time of patenting.
- 69 entries in warrant registers of the time of patenting.
- 176 calculations of sums due.
- 176 certificates of sums due directed to State Treasurer.
- 176 State Treasurer's receipts entered and delivered to the Auditor General.
- 176 vouchers written and entered in fee-book.
- 176 vouchers numbered and filed.
- 69 patents written, recorded, and indexed, embracing 9,884 acres of land.
- 31 satisfaction of liens entered on land-lien docket.
- 31 certificates of liquidation of liens made out and forwarded to the Prothonotaries of the several counties, under the act of the 4th day of April, 1868.
- 63 caveats entered, recorded on caveat-book, and filed.
- 43 citations issued and noted on caveat-book.
- 132 surveys copied and certified under the act of 16th day of February, 1833.
- 29 patent books re-indexed, embracing 19,140 patents.
- 12 monthly statements delivered to the Auditor General.

Mutilated Surveys.

The work of copying old returns of surveys and other ancient and important official papers, that had become worn or defaced, as authorized by an act passed February 16, 1833, was continued after the first day of May last, from time to time as other duties permitted. Over seven thousand original surveys, besides many other valuable papers, have been copied and certified in pursuance of the act mentioned, and have been filed away so as to avoid the further injury that the fragile papers would sustain in the daily handling to which they would be subjected if continued in the regular files. When a sufficient number of copies have been made to form a convenient sized book, they are suitably bound.

Patent Indexes.

The re-indexing of the patent books commenced during the term of General William McCandless, and continued by my predecessor, has been carried on as rapidly as the current business of the Department admitted.

The Building not Fire-Proof.

The attention of the General Assembly has been called, in the reports of my predecessors, to the fact that the building containing the archives of the Department is not fire-proof. All the officers and employés realize its destructibility, and they have been enjoined to exercise the greatest care to prevent any calamity by fire. Yet, with the utmost vigilance, an accident might happen. There are deposited here the records of the original title to all the lands of the Commonwealth—the accumulation of more than two centuries—and their destruction would entail an irreparable loss upon many citizens of the Commonwealth.

The State Boundary Commissions.

The commission appointed by authority contained in the act of the 8th day of May, 1876, acting in conjunction with a similar commission on the part of the State of New York, “to examine as to the true location of the monuments which mark the boundary line between this State and the State of New York, and in connection with said commission of the said State of New York to replace any monuments which have become dilapidated or been removed on the boundary lines of said States,” has not yet so fully completed its labors as to prepare, for filing in this Department, as is directed in said act, a final report of its proceedings. A report of progress is appended hereto.

The work of examining the boundary line between this State and the State of Ohio, and the replacing of dilapidated or removed monuments thereon, authorized by the act approved the 18th day of May, 1878, and by a supplement thereto, approved the 10th day of June, 1881, has been completed, and the final report of the joint commission, accompanied with a map of the line, will be found on subsequent pages. The survey of those portions of our western and southern boundaries separating this State from the State of West Virginia, conducted under authority contained in the acts last above mentioned, is advancing toward completion, as will appear by a communication from the joint commission attached to this report.

Reports of the Second Geological Survey.

On the 23rd day of June last, a communication was received from the Committee on Publication of the Board of Commissioners of the Second Geological Survey of Pennsylvania, transmitting a copy of a resolution adopted by the Board at a meeting held in Philadelphia on the 20th of that month, as follows, to wit :

“*Resolved*, That the Secretary of Internal Affairs be and he is hereby requested to take charge of all the copies of the reports of the Geological Survey now published, or hereafter to be published, which are intended to be sold under the act of 1874. That he be also requested to store the copies for distribution, and to distribute the same as requested by the Board. And that the Publication Committee be authorized to act for the Board in carrying out this resolution and making the transfer; and that,

if necessary, they procure an opinion from the Attorney General on the subject."

The communication contained references to the Constitution and to several acts of Assembly, and a suggestion that under these enactments, the work of receiving, storing, and distributing the reports could be properly and legally performed in this Department. At the request of the Secretary of Internal Affairs, the Board addressed a similar letter to the Attorney General for his opinion, and, on the 6th day of July, that officer expressed his approval of the proposition of the Commissioners. Accordingly, rooms in the building were appropriated to and fitted for the reception and storage of the reports, and some weeks later the transfer was made, which embraced over forty thousand printed volumes. This relieved the Board of the rental of a house used for storage purposes and of the expenses incurred in maintaining an office in this city. Since the transfer, the work attending the receipt, distribution, and sale of the reports has been performed by the force of this Department.

The reports and maps published to date comprise fifty-four separate volumes. A circular catalogue, containing a brief reference to the title and contents of each volume, and the price, as fixed by the Board, has been issued by this Department. Of some of the reports, only a few copies remained after the distribution to the public libraries, universities, and colleges designated by the Board as being entitled to receive them under the law. As they are stereotyped, additional copies could be produced without the delay and cost of recomposition, and the question of ordering a reprint of those volumes, the stock of which will soon become exhausted, should receive early attention.

Map of the State.

Under authority contained in an act approved the 19th day of March, 1816, the Secretary of the Commonwealth and Surveyor General entered into contracts with the respective Deputy Surveyors, or other suitable persons, for the construction of a map of each county. The maps were to be on a scale of two and a half miles to an inch, and were to "exhibit the boundary lines of the county and of each township, the courses of the rivers and other principal streams, the position of the mountains, the lakes, and mineral and salt springs, the cities, towns, villages, and remarkable buildings, the roads, noting particularly such as are turnpiked, and the distances in miles, between the principal towns and remarkable places," and were to be forwarded, when completed, to the Surveyor General. These officers, as further authorized by the act mentioned, entered into a contract with John Melish for the engraving, on copper, of a map of the State, on a scale of five miles to an inch, and the printing of a number of copies thereof, to be constructed from the information contained in the county maps.

Copies of the county maps remain in the Department, and have proven to be of great service in tracing the boundaries of such counties and townships as have been changed by new erections. The appropriations made

for the construction of these maps were inadequate to secure correct representations of the physical features of the State, and the errors contained thereon were, necessarily, reproduced in the Melish State map, yet it was much superior to any publication that preceded it and has furnished the frame-work upon which all subsequent maps of the same territory were constructed.

A correct representation of the topographical features and political divisions of the State can be made only by some method similar to that adopted by the United States Government in its Coast and Geodetic Survey. Our sister State of New York is now engaged in such a work. The U. S. Coast and Geodetic Survey is extending its net-work of triangulation over this State, and the exact geographical position of a number of stations has already been determined. From these stations, and others that will hereafter be fixed, the details of the intervening districts could be filled by competent engineers. The propriety and expediency of authorizing such a survey are respectfully presented for the consideration of the General Assembly. The extent of the work of the U. S. survey within this State will appear in the annexed paper on "The Geodetic Triangulation in Pennsylvania," furnished by the courtesy of Prof. Mansfield Merriman, assistant in charge.

Meridian Lines and Standard Measures.

The General Assembly, by an act approved April 26, 1850, (P. L. 595,) required the erection of a true meridian line and a fixed standard measure for two and four-pole chains in each county, and prescribed the duty of every land-surveyor relative to testing his instruments and making returns of surveys. It is urged by many persons having practical experience in land-surveying and in the adjustment of disputed boundaries, that further legislation should be invoked by which some standard of qualifications for the practitioner should be established; the errors of our old official surveys might be corrected while the evidence yet remains upon the ground, and proper records thereof made; and an uniform system for the permanent marking of boundaries and perpetuation of evidence thereof enforced.

Appended hereto is an illustrated paper, entitled "To Determine the True Meridian with ordinary instruments, either by night or day observations," prepared by Lewis M. Haupt, Esq., Professor of Civil Engineering in the University of Pennsylvania, and formerly assistant in charge of the U. S. Geodetic Survey in Pennsylvania, which will prove of interest and great value to practical men.

In the reports of this Department for the years 1876, 1877, and 1878, replies to inquiries relative to the observance of the law of 1850 were published and they stimulated an increased interest in the subject. During the year just closed, a circular inclosing a copy of the law, and asking information on several points pertinent thereto, was addressed to the county surveyor and to other surveyors of each county. The topics on which information was sought, are as follow:

1. Meridian Line. I. Location. II. When established. III. How marked.
 2. Amount of present declination of the needle from the true meridian and progression since its establishment.
 3. Note other reliable tests by retracing fixed and certain lines.
 4. What additional legislation would you recommend to secure the greatest attainable accuracy in land-surveying and the preservation of boundary monuments?
 5. Remarks and suggestions.
- The replies are appended:

ALLEGHENY.

J. H. McROBERTS, }
R. M. McKINNEY, } *150 Fourth Avenue, Pittsburgh.*

Answer to question 4.

All new surveys made in dividing upland to be marked by stone or iron monuments at each angle of survey at time of making survey. Said monuments to be put in under the supervision of surveyor, and by him duly referenced to two or more objects in close proximity. And any owner of land neglecting or refusing to place said monuments at the several angles within thirty days to be subject to fine, and any surveyor making survey neglecting or refusing to supervise the same, shall be fined ——— dollars for each offense.

The above also to refer to owners of land on each side of the old lines retraced and accepted as the dividing lines between their respective properties.

Answer to question 5.

In our opinion, a true meridian established at county seat is of no practical value, but is liable to lead to much confusion in reports of surveys to true meridian.

The magnetic needle is never precise and seldom correct, and within a few hours after testing, and not many miles distant from the *established* true meridian, we have no absolute assurance that there may not be from five to twenty minutes difference between the supposed true and the correct true meridian. In retracing old lines of considerable length, and by taking careful fore and back sights with a transit in good adjustment, the needle will sometimes vary from five to ten, and even twenty minutes in as many hours. Especially is this true if the survey be made during the occurrence of a magnetic storm.

As an example of being compelled to report surveys to true meridian: A adjusts his instrument April 1, 1882; finds variation 2° . Makes a survey on February 1, 1883, and reports according to test of April, 1882; then, on April 1, 1883, he re-adjusts on true meridian at county seat, and finds variation of $2^{\circ} 10'$; and on April 2, 1883, makes a survey of an adjoining tract to one surveyed February 1, 1883, and finds the same magnetic bearing "runs" both.

Which is the true meridian, and what assurance have we that the variation between 1882 and 1883 is not largely due to magnetic storms while taking one or both observations, or when tracing the first or second tracts?

In our opinion, no *true* meridian is of any value in making surveys except those *connected* with the survey to be made by *measured* angles.

We would suggest that a *base line* be established on each survey to be made, and angles measured and bearings calculated therefrom, and so placed on a plan; and that *no* deed, mortgage, or article of agreement be admitted to record which *does not* contain said plan, or a copy thereof, *as part of said indenture*.

The time for any law requiring the testing chains is nearly past, as nearly all surveyors use steel tape, but we think a wooden rod, well-seasoned and well-protected from dampness, with a spirit level in each end, is the better measure.

The following plan may illustrate a system of surveys made by the State or county, and monuments placed in convenient locations for use in private surveys, having the monuments numbered, and a plan of same placed in each recorder's office of the several counties. Please notice that the latitude and departure for each monument is given, so that the *true* bearing between any two which may be convenient to the survey can be taken as a base. The plan is not drawn to scale :

BEAVER.—James Harper.BEAVER, PA., *October 1, 1883.*

1. A meridian line was established in March, 1878, in the public square. It consists of octagonal stone monuments, one foot square at top, standing about thirty inches out of the ground. Copper pins are set in the top of each. They are six hundred and two feet apart, but too near to buildings to be of any practical use.

2. The declination of the needle from the true meridian, on September 28, 1883, was $1^{\circ} 42'$ west. The annual change $3'$.

4. In order that we may get a "*true meridian*," located in each county, there should be a law passed requiring the Governor to appoint a man possessed of that amount of astronomical knowledge that will enable him, with the use of a proper instrument, to correctly locate a true meridian in each and every county in the State. Every county should have on record a true and correct map of their county, with the courses and distances of each line. Also maps of the townships, with course and distance. All boundary lines of State, county and townships should be marked with stones set firmly in the ground. A copy of each county and township map should be filed in the office of the Secretary of Internal Affairs.

5. Our monuments are not to be relied on, from the fact that they were located by an assistant railroad engineer, with an ordinary transit. Without the use of the proper astronomical instruments a true meridian cannot be correctly set, so we are virtually without any. There has never been a standard measure fixed for a four-pole chain. We have one for a two-pole chain on the pine floor in the commissioners' office.

BEDFORD.—Daniel Sams.EVERETT, *November 22, 1883.*

1. There was a meridian line established on the court-house grounds, in the borough of Bedford, the 11th day of August, 1877. It is marked by two stones set in the ground surrounded by solid masonry.

2. Last April the declination of the magnetic from the true meridian was found to be three degrees thirty-four minutes ($3^{\circ} 34'$) to the west. The progression appears to be about four minutes each year.

3. I find by retracing lines that have been surveyed and marked within the last eight or ten years we have to allow about four minutes for each year. On surveys of an earlier date, we are not required to allow the same proportion. On surveys made in 1815, we allow about four degrees. By this I wish to be understood, we turn the front end of the compass-box four degrees to the right.

4. Have a law passed prohibiting any one from surveying until he is competent. Where the timber is gone, have the line and corners marked by artificial monuments.

CAMERON.—V. A. Brooks.*STERLING RUN, November 14, 1883.*

1. None established in this county.

3. I find, by running or retracing lines of 1796, that the present declination of the needle from true meridian to be four and a half degrees west.

4. At present we run lines, when dividing warrants, to correspond with old lines, and also the measurements, to correspond with the original. But a greater part of the old monuments are gone, and in a few years we will have trouble to locate most of the original warrant lines. If parties owning land could be compelled to keep the monuments in a good state of preservation, then much trouble and expense would be saved; if not, the time is not far distant when, if the land has any value, there will be endless cases of litigation.

CRAWFORD.—Frank R. Young.*BLOOMFIELD, November 6, 1883.*

1. A meridian line was located on the poor-house farm, at Saegertown, May 1, 1880. It consists of two stone monuments. The south one is about two and a half feet high, with brass plug in the top, finely turned, with a point for transit, and with movable plugs to set in the brass for compasses. The north monument is about one foot high, with a hole, three eighths of an inch in diameter, drilled in top, to insert the foot of a flag-staff. The monuments are set about three feet in the ground, securely fastened against frost.

2. The present declination is $3^{\circ} 15'$. The variation since the establishment has been very uniform: in 1881, $6'$; 1882 and 1883, $5'$ each year. Owing to the apathy of former surveyors, and ignorance or carelessness of the county commissioners, the old register was lost about 1864. The monuments, at that time, were removed, owing to the rebuilding of the courthouse, and from that date until 1880 we had none. The standard measure to adjust our chains is on the stone base of the poor-house.

5. I would suggest that the words in section two of the act of April 26, 1850—"by one of the said meridian lines"—be stricken out, and the words (or similar ones) "Every surveyor, before doing work in any county of this Commonwealth, shall adjust his instruments by the established meridian of the county in which the work is to be done," inserted. Also, that while the law requires the surveyor to adjust his instrument, and return the true bearings, &c., that there should be a law to compel some one to prosecute every surveyor for not adjusting his instrument and returning the true line, or for making a false return.

CUMBERLAND.—J. C. Eckels.CARLISLE, *October 10, 1883.*

1. A meridian line was established on the poor-house property near the borough of Carlisle, in Cumberland county, in 1854, marked by small monuments with steel points on top. The variation in April, 1854, as recorded in commissioners' office, is from 2° to $2\frac{1}{4}^{\circ}$ west of said meridian, increasing at the rate of 4 minutes per year until the present year, which is on record from 4° to $4^{\circ} 15'$.

2. $4^{\circ} 15'$; increase of two degrees since 1854.

DELAWARE.—William H. Flaville, Civil Engineer and Surveyor.CHESTER, *November 10, 1883.*

1. A meridian, and standard distance, thirty-three feet, were duly established in 1851. The meridian was marked by stone monuments, planted near the court-house, at Media—say one hundred yards apart. For a few years our surveyors took some notice of the law, and occasionally registered their instruments with the variation of the needle, &c., but the whole matter is now "a dead letter" among us; there is *no* book, *no* standard distance, and no registration has been made for many years past.

2. The present declination of the needle is $7^{\circ} 35'$ to the west; and is about 1° greater than when the monuments were set up.

4. The only further legislation that can avail "to secure the greatest attainable accuracy," &c., would be some law requiring our surveys to be made *only* by intelligent and competent men; and that there should be some law regulating the practice of the "surveyor" and "engineer," requiring full proof of his qualifications before some duly qualified "board" or "tribunal," there can be no question.

ERIE—George Platt, C. S.GIRARD, *November 9, 1883.*

1. The meridian for this county is located in the Erie City cemetery. The monuments are about four feet high and set upon stone foundations, and marked with perpendicular black lines for line. They are about three hundred (300) feet apart. There seems to be no record of the time that they were established, but the first record for declination of the needle was made by Samuel Low (who placed the monuments) April 4, 1855.

2. The following is taken from the records, as entries from three of our oldest surveyors. Present declination about $3^{\circ} 20'$ west.

	1855.	1856.	1857.	1858.	1859.	1860.	1861.	1862.

The foregoing is a fair sample of the difference of opinion among surveyors of this county as to the location of the magnetic pole.

My instrument does not show such extreme changes in declination, although I do not test my declination at the monuments, having a much longer sight at my own home; and testing my needle often and keeping it fully charged, I find the yearly change to be from 3' 30" to 4', but have noticed within the past three years that the change at times would be much less than the average and not as uniform as formerly. It is just near enough to accuracy (when properly understood) to do mischief when connected with surveying. At sea it is useful, but seamen do not trust it without the sun's azimuth in connection with it for correct bearings.

3. In my practice I usually run "random" lines as near as I can judge, the bearing of the line called for, and correct to such points as I find (if any) along the line. If there are no points on the line to be found, nor a corner at the end, I take a recorded bearing of some other line and note the changed bearing and work accordingly, trusting to Providence for results.

4. Under this head, I will say in substance what was embodied in a communication to one of the conventions of surveyors, held at Harrisburg some time ago. Let a base line be established in every township at or as near its center as possible, of sufficient length to form a system of triangulation for the town. This base need not necessarily be a meridian, but any bearing that best suits the topography of the country, and where it can be measured over comparatively level ground. Let this base be carefully measured several times so as to reduce errors to their least possible quantity, then determine the bearing of this line by observations of the pole star or by the sun's azimuth. From this line form triangles as nearly

equilateral as possible with the base. The triangles can be made to reach long distances by locating points on prominent localities. The length and bearing of these lines can then be computed, and a map drawn to be put in the hands of the clerk of the township as a matter of record. It is to be presumed that every surveyor in the town would place the bearings in his note-book for convenience.

As it is probable that it will be a long time before we will have a law doing away with the use of the needle, we will suppose that we are called upon to make a survey and wish to use the needle. We have only to go to a side of a triangle nearest our work and get the variation, with the advantage of having the same conditions as to temperature and weather, and finish our survey with a feeling that if another party has occasion to retrace our lines, he can do it almost to a certainty years afterwards.

Another advantage to be taken into account is that you get the variation for the exact locality, instead of attempting to carry the variation at the county seat to different parts of the county, (which is simply impossible to do and give correct bearings.) This feature alone is worth all of the expense of locating triangles. Should you wish to make your survey by angles, without the needle, the sides of the triangles form good base lines for such a purpose.

Mr. John B. Kaufman, of Franklin county, in his report of 1876, I think, has the correct idea in general, only I would add triangles. He recommends a meridian in every township, which would be much better than the present county meridian, but there are times that a surveyor could not make it convenient to go a few miles out of his way to test his needle, and would consequently neglect it, but if the sides of triangles were used, he would have points near his work to get his variation from. Locating triangles, even if it changed the old recorded bearing, need not change the lines. The same marks would, of course, hold even if the bearing should require changing of subsequent surveys. I do not think that there could be any reasonable objection to the plan on that score, for there are marks enough left yet to prevent the changing of lines generally; but in the future, as the marks become obliterated, the triangles will keep all in proper check, and all surveys if recorded with reference to them will secure permanent location. I do not believe that the adoption of such a plan would be expensive, compared with the benefit derived. In my opinion, much litigation would be avoided in the future, and people would have more confidence in surveys than they have now.

The formation of triangles should be made by competent parties, with great care, and with a well-graduated instrument. The telescope should be able to stand the test of reversion and change of focus for long and short distances without breaking the line, when placed over difficult points on the line. This is a severe test, and many seemingly good instruments fail in this respect.

One observation will not suffice for the measurements of the angles, but

by the means of several observations, good results can be assured with a well-graduated transit. As the law now is, it is simply impossible to carry it out in practice, and is the cause of more trouble and vexation than if there was no law; for the reason that some of the surveyors will make no allowance for differences of latitude or longitude, but use the city variation for all parts of the county, regardless of consequences. Law-makers are not always posted in such matters. I believe that Congress once enacted a law that the Government lands should be laid out in townships, exactly six miles square. It was soon found out that they had enacted a law that it was simply an impossibility to carry out, on account of convexity.

5. I would suggest that if this matter is to go before the Legislature, and should it be left to a committee to report, that such committee should call to their aid such men of practical experience as yourself and John B. Kaufman for consultation, so that if anything is done there will be no mistake about its practicability.

I would also suggest that there should be some law enacted that would require men that wish to practice the profession to be thoroughly examined by a competent board as to their qualifications, and no survey should go upon record unless made by a man so qualified. I can see no reason why the profession should not be protected as well as the law, medicine, or the clergy. Let us have something done, and done effectually, and put an end to half-way surveying and the other half guessing.

FAYETTE.—S. M. Foust.

CONNELLVILLE, *November 9, 1883.*

1. The commissioners of Fayette county did not keep a record of the date at the time the meridian was established, and the nearest date bearing on the subject is the order issued to John Patrick for the payment for that service, which was October 21, 1851; and I suppose was immediately after the work was done.

The meridian is marked by two cut-stone monuments, planted on end, near Uniontown, Pennsylvania, standing about three feet above ground, and a center draft cut on the inside face of each.

2. Record of tests made by different surveyors, at different times since the meridian was established.

2. From observations made several times each year beginning September 26, 1878, and ending November 9, 1883, on my private meridian line at Connellsville, the average annual progression was found to be 4' 6" per year.

4. In retracing the original surveys of land in this vicinity which are dated from 1776 up to 1836, these being maximum dates that I have had experience on, I find by using the period of no variation as beginning at 1800 and ending at 1810, that period of ten years having no variation; prior to 1800 variation was east; since 1810 west. By using this as a basis on any of the surveys made prior to 1800, and using 4' as the annual variation I have had very good success in resurveying these old tracts. I also find by using variation recorded on my meridian, I can retrace all surveys made from 1800 to 1810.

CONNELLVILLE, PA., November 9, 1883.

J. SIMPSON AFRICA, *Secretary of Internal Affairs* :

DEAR SIR: As to the necessary legislation required to secure accuracy in land surveying, that is a problem that would be difficult to solve, and I could not undertake to prescribe the necessary remedy. No doubt but that if there could be a law enacted that would place that kind of work in experienced hands, and exclude all that are not competent, that of itself would have a tendency to improvement. This part of the State has become such a net-work of railroads, and other public works keeping step with the consequent development, that so much local attraction exists that it is becoming very difficult to use the magnetic needle in many places in making surveys. A law compelling the use of a transit, and angles used instead of magnetic bearings, true bearings being reduced from the angles, would no doubt secure more accurate work; but in order that a law for that purpose be effective, it would have to operate on the employer as well as the employé.

Another feature in surveying by angles would be the necessity of having

a system of meridians established over the State in such a manner that one or more of the lines of the meridian would lie across each township, so that surveys could start at some point on a meridian and a number of surveys could be tested on it or some other meridian.

The inclosed pencil sketch would help to illustrate an idea. The meridians should number from some point east and west, and have connecting lines from one to another, and have monuments set at convenient distances, each monument to represent a station, being unit of some distance expressed by one hundred, as one hundred rods—station No. 1—and numbered from station 0 up, any intermediate station marked the last station number and $\frac{1}{100}$ the fractional part of a station; the numbers of the meridian and station cut on each monument.

Land corners should have stone monuments permanently fixed.

Owing to a press of business, I neglected your communication and circular longer than I should otherwise.

Yours very truly,

S. M. FOUST.

FOREST.—Samuel D. Irwin.

, TIONESTA, *October 18, 1883.*

1. There is no meridian line in our county, I regret to say, consequently we have no official record connected with the observation of the same. I have a sun dial, the gnomon of which I consider accurate, as I was careful in that particular; taking observations on the north star (Polaris) when I fixed the same, several years ago. The dial is of marble, about twenty inches square, bedded in a brick column two and a half feet high, built in a sunken rock that goes below the frost. Dial traverses down to five minutes. This dial has been built eight years.

2. There is no standard measure for chains—this is fully as important as the true meridian line, in my opinion. It is claimed for some of the new steel chains with brazed links, that they remain true; yet if used much they will wear some, or if accidentally broken, as they sometimes are, care has to be taken in mending them; while the old-fashioned wire chains are noted for their stretching qualities, and should be frequently tested.

While the compass is said to be a treacherous instrument, the needle constantly changing, as the surveyor knows, yet in my opinion, I know of no instrument that can supply it free from every imperfection and defect. Poets make the needle to point true to the "mysterious chambers of the north," yet the practical surveyor thinks differently at times. The true meridian line would be the best gauge to regulate it.

The only method we have here to arrive at the progression, is by examining lines with the same compass and needle that were used on them some ten years ago; yet in this, even, by taking back sight and fore sight, you are still liable to three or four minutes of error. In taking some of these bearings I think from observation, there has been of late a progression, say of three to four minutes a year, perhaps.

3. Lines that were run about the beginning of the century as magnetic meridians, vary now from $2^{\circ} 30'$ up to even 3° . This inequality I attribute to the old compasses with which they were run, being either defectively graded, dull pins or points, careless running of original lines—in short, various causes.

4. I would humbly suggest better corners and monuments. Perishable posts are mischievous, and the setting of them should be prohibited by law. I would have solid stone corners; there is nothing better; the same marked with a letter. Then I would “tie” that corner down by taking bearings from objects not likely to be removed; if trees, I would take their bearing and mark the distance, facing in the wood in Roman figures thus: X facing for ten feet. The old three hacks for a *witness* tell you nothing definite. I have practiced this way of tying corners to the satisfaction of the people. In towns I would have permanent iron posts at the corners of all blocks, and those tied to initial points of survey sunken in the exact middle of the cross-streets.

FRANKLIN.—John B. Kaufman, C. S.

UPPER STRASBURG, *October 24, 1883.*

1.—I. It is located in a field near the buildings on the alms-house farm about three and three-fourths miles nearly east from the public square in Chambersburg.

II. In December, 1851, by J. Stilly, C. E.

III. The terminal points, which are about four hundred feet apart, are marked with monuments of dressed stone, deeply sunk in the ground, reaching above ground about two feet; on top of each is inserted an iron spindle painted white, and terminating in a fine point. The monuments are in all respects alike. The standard measure was originally in one of the corridors of the court-house. During the great fire in July, 1864, the court-house was destroyed, and the standard was not restored until April, 1875, when one was established in a corridor of the stone building occupied by the steward of the alms-house. The variation book is kept in the commissioners' office at Chambersburg.

2. Eight instruments were tested last spring, showing the following results:

A. B. Stoler's surveyor's transit, at 10.45, A. M., April 14, 1883, showed $4^{\circ} 12'$ West.

John W. Kuhn's Vernier compass, at 12, M., April 25, 1883, showed $3^{\circ} 51'$ West.

George M. Stenger's compass, April 27, 1883, showed $3^{\circ} 45'$ West.

Joshua Gettel's compass, April 28, 1883, showed $3^{\circ} 35'$ West.

John B. Kaufman's solar transit, between 3 and 4, P. M., April 30, 1883, showed $3^{\circ} 50' 30''$ West.

J. C. Burns' compass, between 1 and 2, P. M., May 7, 1883, showed 4° West.

F. J. Pfoutz's compass, between 4 and 5, P. M., May 7, 1883, showed $3^{\circ} 45'$ West.

A. S. Winger's compass, between 10 and 11, A. M., June 11, 1883, showed $3^{\circ} 45'$ West.

Average of eight instruments, $3^{\circ} 50' 26.25''$. Average declination in April, 1852, $1^{\circ} 39'$. Progression in thirty-one years, $2^{\circ} 11' 26''$. Average annual progression, $4' 14.4''$. My transit, between three and four, P. M., April 12, 1879, showed $3^{\circ} 31'$; at half-past four, P. M., April 19, 1880, $3^{\circ} 36'$; at two, P. M., April 20, 1881, $3^{\circ} 41'$; between eleven and twelve, A. M., April 29, 1882, $3^{\circ} 45'$; between three and four, P. M., April 30, 1883, $3^{\circ} 50' 30''$.

Declination in April, 1878, was $3^{\circ} 24'$. Progression of my instrument in five years, $26.5'$. Average progression per year, $5.3'$.

John W. Kuhn's compass, in 1878, was $3^{\circ} 24'$; in April, 1883, showed $3^{\circ} 51'$, or a change of $27'$ in five years, and an annual change of $5.4'$. I have at my residence, about nine miles north of Chambersburg, a meridian for my own use, upon which I have examined my instruments quite frequently, with results agreeing very nearly with those obtained on the county meridian. In compliance with a request of the Society of Surveyors and Engineers of Ohio, to the surveyors and engineers of the several States, to test their instruments, as nearly as possible, at eight o'clock, A. M., on the 20th day of October, 1883, I did so this morning, October 20, on my line, but owing to the rain and fog was unable to make observations until about nine o'clock, from which time on I took hourly observations until two, P. M. At nine, A. M., the declination was $3^{\circ} 43'$; at ten, $3^{\circ} 46'$; at eleven, $3^{\circ} 48'$; at noon, $3^{\circ} 48'$; at one, P. M., $3^{\circ} 49'$; and at two, P. M., $3^{\circ} 48'$. This result is somewhat less than in April, and less than for several months after, as in April the declination was $3^{\circ} 50\frac{1}{2}'$. On September 26, at 8.15, A. M. till 8.30, the declination was $3^{\circ} 45' 36''$. Apparently, this would seem as if the needle was retrograding, but, doubtless, it is caused by different electrical conditions, causing irregularities from the normal condition of the needle, or rather from its ordinary rate of change.

In addition to the secular variation, which changes in one direction pretty uniformly during a period of many years, the needle seems to be subject to secondary changes or fluctuations, running their course in much shorter periods or cycles, and circumscribed within much smaller limits of arc, sometimes almost neutralizing or hiding the secular movement for a time, whilst for other periods, when moving in the same direction, the annual change is augmented considerably beyond the amount of average change. Such seems to have been the case for four or five years past, and it is more than likely that we may be approaching a period when a much diminished rate may, for a time, be expected. However, time will show whether such be the case, and it must be admitted that the laws governing the magnetic needle are yet so little understood that it is, perhaps, next to idle to speculate upon its actions in the future. If we could sufficiently prepare our-

selves for such contingencies that are sure to confront us when we attempt to retrace old lines, or to restore lost or extinct corners, so as to be able to ascertain and make the proper allowance for variation, and to do the work accurately and satisfactorily, a long step will be gained towards that very desirable end.

3. On the 16th day of October, 1882, I ran a part of a line, some three miles west of Chambersburg, that had been surveyed March 25th, 1746. The original line ran S. 64° E. 212 perches. Referring to my table in my field-book, computed from my formula several years previous, I found under 1746 the declination 3.31° . I had my vernier set to the true meridian, (viz: $3\frac{3}{4}^{\circ}$) and set my instrument to S. $67^{\circ} 19'$ E. and struck a white-oak tree which had been frequently notched, and was gratified to find other very old and satisfactory marks on the same course. In 1876, that line could have been run by the same magnetic bearing as originally. For other lines and tests, I refer to my report in 1878.

4. I would favor a geodetic survey of the State, covering its area with a net-work of triangles properly defined and marked, and that tract surveys be made by triangulation from the base lines thus obtained, wherever the lands are sufficiently valuable, by which the greatest attainable accuracy would be secured; and I would be in favor of such legislation and appropriations as would speedily bring about so desirable results. In New York, a survey of that kind has been in progress for some years, but how far advanced I have not been advised.

I confess that I do not feel very sanguine that our Legislature will very soon authorize or encourage such a movement by friendly legislation, and the day such laws will be passed is yet distant, if we may judge from past experience; but I, nevertheless, would prefer a law of this kind to any method that I know of. If this cannot be done, as the next best thing, I would favor the establishment by law of one or more meridians, or other base-lines of moderate and convenient length, in suitable places, easily accessible in every township, making it the duty of every surveyor to observe the declination of the needle on said line the same day a survey is made, and return the survey by the true bearings as found by said test. Besides this, the law ought to forbid the use of any instrument without a vernier, or better still, if confined to instruments capable of taking angles independently of the needle. Of course, the old plain compass would have to go. Failing in this, I would advocate a modification of the law of 1850; would make the duty of annual tests, if possible, more imperative, and have the tests made on a particular day, and as near as possible, the same hour; add a penalty for not returning drafts by the true meridian; allow reasonable compensation for attending court as experts, when called to testify in matters relating to the accuracy of lines and surveys, but that no surveyor or engineer be deemed as an expert, or entitled to more than ordinary costs, and his drafts not to be deemed legal unless he has complied in all respects with the requirements of the law, and has used instru-

ments capable of taking angles independently of the needle, and a steel-tape, or other equally precise instrument, to measure distances; that no survey made in future to be legal in any of the several courts, unless made in accordance with the law. Such provisions might induce surveyors to observe the law if the risk of a penalty will not, or it might induce them to quit a business they sometimes disgrace, and we would get rid of bad instruments. Speaking of steel-tapes, I cannot see any excuse now to use a heavy, clumsy chain, liable to kink, wear, and stretch, when a convenient, simple, and light steel-tape can now be obtained cheaply. Justus Roe, of Patchogue, Suffolk county, New York, and S. C. Hodgeman, of Traverse City, Michigan, and both civil engineers, furnish such tapes very cheaply, and they answer the purpose admirably. I am of opinion that there should be legislation towards defining the kind of monuments to mark boundaries and corners, and restricting the placing of them to the proper authority. I think the monuments should be durable, easily distinguishable, and cheap, but whether they should be of dressed-stone, cast-iron, either hollow or solid, or of some other indestructible material, I am not prepared to express a definite opinion. I hope my brother surveyors will suggest something practical and satisfactory.

GREENE.—C. C. Brock.

WAYNESBURG, *September 29, 1883.*

1. Meridian line located at Waynesburg, the county-seat.
 2. Established in or about 1852.
 3. By vertical stone with a cross cut on the top and hole in center for flag-staff. These stones are firmly set in broad flat stones sunk in ground below frost depth. The stations are about three hundred yards apart. The south station stands at the north-west corner of public square, and the other on the hill at the east edge of Washington street.
2. The present declination of the needle is about $2^{\circ} 29'$ west.

HUNTINGDON.—Henry Wilson.

DONATION, *November 1, 1883.*

1. The commissioners of the county had a true meridian line erected in the court-yard at Huntingdon, about the year 1852, which was destroyed in 1863, and has not been reestablished.
2. From the best information I can get, the declination at present is a little more than $4\frac{1}{2}^{\circ}$ west. On the 9th day of April last, I was with J. Murray Africa testing his transit and compass on a true meridian near the north-eastern limits of the borough of Huntingdon. The result of several observations made the declination $4^{\circ} 33' 40''$. The declination in April, 1852, according to the meridian in the court-house yard, was $2^{\circ} 16'$, making a difference of $2^{\circ} 17' 40''$, in thirty-one years, a yearly average of a little more than $4' 25''$, which I think is a little too much.

3. On the 6th day of May, 1878, at nine o'clock, A. M.—thermometer 60° —I took the bearing between two trees, distance apart about one hundred and sixty perches, and found it to be S. $81^{\circ} 25'$ W. On May 6, 1881, the bearing between the same trees was S. $81^{\circ} 38'$ W., showing a difference of 13' in three years. One of the trees has been cut down. I put a target at the stump, and at 8.20, A. M., October 12, 1883—thermometer 63° —the bearing was S. $81^{\circ} 20'$ W.; at 5.30, P. M., thermometer 68° , the bearing was S. $81^{\circ} 38'$ W.; October 31, at nine, A. M.—thermometer 55° —bearing S. $81^{\circ} 35'$ W.; and at three, P. M.—thermometer 57° —the bearing was S. $81^{\circ} 45'$ W.; November 1, nine, A. M.—thermometer 46° —bearing S. $81^{\circ} 35'$ W.

From my observations under No. 3, you will see considerable oscillation in the needle of my compass, for which I cannot account. I have found it in my practice last summer. In running lines of old surveys, I scarcely ever mark them without retracing. If I do not come out at the corner, I calculate the variation, run the line over and mark it. In retracing lines recently, if I did not do it immediately after running them, in some instances I have come out nearly as far from the corner as I did the first time. My instrument is in adjustment, and I am unable to determine if the differences mentioned are to be attributed to electrical disturbances or some other cause.

INDIANA.—Thompson McCrea.

BRUSH VALLEY, October 17, 1883.

1. A meridian line was erected in the court-house and jail-yard in the borough of Indiana, in the year 1852. It was set on two blocks of stone, about one hundred feet apart. In each was set a wooden post, with lines marking the true meridian. Between these blocks a stone was set, so that instruments could be tested as to their true magnetic bearings by targets at each end of the line. Upon a painted log was marked $\frac{1}{2}$ rod— $\frac{1}{4}$ rod, and the link of a two-pole standard brass chain.

2. At the time this meridian line was established the variation was $50'$ West. I cannot say what the present declination is, as this meridian line was destroyed at the time of building the new court-house, and no other has been erected. There is no book in the commissioners' office containing a record of any variations. The law is, and has been, treated as a dead letter.

4. I would recommend that the act of 1850 be repealed, and in lieu thereof have an act passed requiring a stone or metal post to be set at the corners of all lands when surveyed or resurveyed, and also at the corners of each square or block in each town or village when laid out.

JEFFERSON.—Abner Spyker.

BROOKVILLE, October 2, 1883.

1. A meridian line was established in the borough of Brookville, Jefferson county, on the public ground known as the church lot, April 4, 1851. At

that time the needle varied 1° W. of N. April, 1883, variation of needle, $3^{\circ} 15'$. (Marked by stone pillars set in the ground.) Difference of variation since meridian line was established, $2^{\circ} 15'$. A standard measure of a two-rod chain is also deposited in the commissioners' office.

2. Present declination, $3^{\circ} 15'$ W. of N. Progression since its establishment, $2^{\circ} 15'$.

LAWRENCE.—Carl F. Lawrence.

PLAIN GROVE, *November 13, 1883.*

1. A meridian line was established in New Castle in the year 1852. It is in front of the court-house, and is marked by two steel points inserted in blocks of stone, which are set in foundations below the reach of frost. It seems to be reliable and permanent.

2. Present declination of the needle from true meridian is $1^{\circ} 50'$ west.

4. I would suggest that some legislation be had to protect the people from incompetent surveyors and the use of inferior compasses.

LAWRENCE.—Theodore Vandivort.

CROSS CUT, *October 9, 1883.*

1. Lawrence county meridian line is located in the front yard of the court-house in the city of New Castle, Pa. From the best data I can obtain, it was established during the year 1852, by James Oliver, a surveyor. It is marked by two cone-shaped sandstone monuments, capped, about twenty-one inches diameter at top, and three feet in height, each surmounted by an iron point. They are placed about one hundred and twenty-one feet apart, and are set about thirty-two feet from court-house building. On account of their close proximity to buildings, and an iron fence around the yard, in testing instruments they are under the influence of local attraction.

4. I would recommend a law whereby a resurvey of the State should be made by running a system of triangulation on a large scale over the entire State, on the principle of the United States Geodetic Survey, then filling in by a subordinate system as low down as a township triangle, and establish a true meridian in each township, and finally filling in and completing the work by the local surveyor, and in fixing the location of property lines the use of the magnetic needle be avoided as much as possible, and the angle of intersection of all lines given from the vernier and reduced to the true meridian. And let it be the duty of every surveyor to file a plat, or enter in a book provided by the county for that purpose, a record of all surveys made by him, giving the location of the property, the bearing of all lines by true meridian, noting the variation from the true meridian in the township where the property is located, giving a description of corners established, length of lines, date of survey, &c. Such a course as this will require better and costlier instruments than some possess who now make surveys, and a greater amount of labor, time, and skill, and, of course, will cost more than the ordinary method of surveying; but if more accurate

work would in the future prevent expensive and troublesome litigations, I believe such a system would be amply worth the additional cost to the land-holders themselves, and a great saving to the respective counties in curtailing court expenses. Am satisfied and believe that if each county and township had some such a system of net-work triangulations, surveys *can* be retraced accurately, and in time the system will prove very satisfactory.

[Mr. V. sends an extract from the surveyor's book, containing a record of tests extending over a period of thirty-one years. The contradictions in the reports are so marked that the line is evidently subject to local attraction. The results are therefore omitted.]

MONROE.—George G. Shafer.

MOUNTAIN HOME, *November 8, 1883.*

1. There is no meridian line established. It would be an advantage to have it established if the spirit and letter of the law were carried out, but I find in one State, (Texas,) where I have had some experience, that while the law is that all returns shall be from the true meridian, that about fifty years ago, (under the Spanish,) observations were taken and variations recorded, and in returns of recent date, that surveys by the needle are returned as having the precise variation found to exist fifty years ago, and in places perhaps hundreds of miles away—*a good system poorly carried out.*

2. The present declination of the needle is about 7° to $7^{\circ} 10'$ west. I have no convenient instrument with which to take the observation. Since 1876, secular change has been about $5'$ per year. My views and observations from records of United States Coast survey, and from running the old lines, &c., were given in the report of the Department for 1878, page 26 A.

3. Result of tests under former heads.

4. 1st. Where the true meridian is not established, that all surveys show date of magnetic meridian, from which bearings are taken.

2d. That on hilly lines both horizontal and sloping distances be given, the horizontal to be calculated from angles of elevation and depression.

3d. That in addition to the monuments usually erected, that they be tied (by bearings and distances) to such objects of a permanent nature as may be convenient.

4th. That the notes, in concise form, of all surveys, be entered in a book, to be kept in a public office for that purpose.

5th. That the notes of all surveys should be tested by the traverse table, within a limit of one fifth of one per cent. of the total distances for closing error, and in failure to close within that limit to be remeasured. Surveyors should certify the percentage of closing error, and that it did so close without "trimming," or if trimmed, which lines and to what extent.

N. B.—It is practicable to make surveys close even on rough and hilly

surface, within an error of one eighth of one per cent.—and generally less—by reducing sloping to horizontal distances.

NORTHUMBERLAND.—Henry S. Boyer.

SUNBURY, *October 24, 1883.*

1. There was a meridian established in 1878. Located partly on the public square and partly on the court-house lot, by stone monuments three hundred feet apart. (See extract from commissioners' record-book.) The N. monument is located within eighty feet of a high, heavy cast and wrought-iron park fence. The astronomical observation was made about one hundred and fifty feet from a large steam saw-mill, high stacks and heavy boilers, then carried south some seven or eight hundred feet, then east about four hundred feet to where the N. monument now is. I never tested the meridian. It would require a great deal of care. I would have to select a place free from local attraction, run a line at least half a mile long with, probably, from five to ten stations and as many angles, cross one single and two double railroad tracks, run along the iron park fence for four hundred feet, pass underneath twenty-five or thirty telegraph wires, and about that many, or more, electric light and telephone wires.

2. The present declination of the needle is about $5^{\circ} 7'$ west. I have no means to know how much the declination was when the meridian was established. The records do not show. Averaging the declination from the different instruments recorded since it was established, shows an annual progression of $4' 2\frac{1}{2}''$.

3. I find about $4'$ for one year or 1° for sixteen years will carry a line as a general rule. I found that a line run in 1765 run the same bearing in 1860; and in 1880 I found (on the same line) $45'$ variation. On old surveys, laid in 1790 to 1795, I find the declination from $4^{\circ} 15'$ to $4^{\circ} 30'$, sometimes only 4° .

4. At present I am unable to recommend any additional legislation to secure better accuracy. Accuracy depends entirely on the operator. An old surveyor in his field-notes of 1793, says: "The country is very rough and the surveying is about like the country." Bunglers we will have to the end of time, law and education to the contrary notwithstanding. As to boundary monuments, you can no more legislate to hold them than you can prevent horse-stealing; the land-owner that is not inclined to protect and secure his monuments is either the gainer or loser by it. This negligence gives employment to the surveyors and lawyers. We can not by legislation make experts out of all the material that passes for surveyors. We find it so in all trades and professions. Begin with the miner and sapper, run up the scale to the lawyer, and you find lots of room in the second-story. The young lawyer may stand as fair an examination as the most profound and never amount to a pinch of snuff. Will legislation make him a good lawyer?

5. Needle-surveying is by no means accurate, but we can not dispense

with the use of the needle. A good operator, with care, can do fair work. Diurnal variation : I made a test October 3, 1880, and found it as follows: Set needle at 0° at eight, A. M.; at nine A. M., change perceptible, needle traveling west; at ten, A. M., change $5'$; at eleven, A. M., $12'$; at twelve, M., $20'$; at one, P. M., $14'$; at two, P. M., $13'$; at three, P. M., $11'$; at four, P. M., $7'$; at five, P. M., and six, P. M., not noted for want of sufficient light to read the vernier.

NORTHUMBERLAND.—Ira Shipman.

SUNBURY, *November 20, 1883.*

1. A true meridian line was established at the county-seat, Sunbury, in October, 1878, by county surveyor S. G. Frey, Dr. Jacob Rhoads, and George W. West, county surveyor of Montour county. The monuments are stone, three hundred feet apart, and are still in proper position.

2. The variation of the needle on the day of establishing the meridian line was $4^{\circ} 57'$ west. The variation of the different instruments registered for 1883, are as follows: George W. Hower, compass, $5^{\circ} 10'$; A. J. Guffy, compass, $5^{\circ} 10'$; H. S. Boyer, transit, $5^{\circ} 20'$; Ira Shipman, transit, $5^{\circ} 10'$; S. I. Houseworth, compass, 5°

3. Too much stress seems to be laid by some surveyors upon giving persons "the full length of their chain," as insisted upon by most persons for whom work is done, seemingly forgetting that scarcely any two sets of chainmen will make the same line *exactly* the same length. If instead of using the chain so freely in such cases, they were to take their angles carefully and note the points of intersection of lines, more accurate results would be obtained.

4. That surveyors be required to place monuments instead of simply driving a small stake or making a mark with the foot and saying "this is about the place." The magnetic needle being subject to diurnal variation and local attraction, that surveyors after having taken the bearing of the line *carefully* at the starting-point, be required to produce or continue the line by means of fore and back sights, thus avoiding any crooks or bends in the line from variation or attraction; that all surveys, especially new ones, be made with an instrument, from which the angles can be noted carefully, regardless of the needle.

PIKE.—John Layton, C. S.

DINGMAN'S FERRY, *November 2, 1883.*

1. Milford, the county-seat, in the center square. In 1852, by two blue stone monuments firmly set in concrete, one hundred and ninety-two feet apart, and rising a convenient distance above the surface of the ground; the shape of the visible portion being a rectangular parallelogram about twenty inches wide by five or six inches thick. The top of the southern stone is marked by cross lines of furrows corresponding with the cardinal points N., S., E., and W., while the top of the north stone or monument is by a single furrow running north and south, in which a small bright object

may be placed easily discernible through the compass sights adjusted on the cross of the southern monument. In line with these two stones stands another of like material, with a furrow on the top running at right angles with the meridian, which furrow is intended to be thirty-three feet from the center of the "cross" on the southern stone.

2. The county commissioners, until very recently, provided no book for entries and, consequently, no record of annual declinations of the needle can be obtained from the record, excepting for a few recent years. From what can be gathered from the office, the yearly progress of the north end of the needle toward the *west* is about 3'. On the 9th of October last, I found a declination of 6° west.* But it may be well to state that the reason why surveyors of Pike county have paid so little attention to the meridian line, is that the county commissioners never have given the required notice of its establishment and its existence is not officially known.

3. In Pike county, on the Little Bushkill creek, four or five tracts were surveyed by James Scull in May, 1769, of which most of the corners were trees. With much time and trouble I found, about twenty years ago, two adjacent stone corners, and, consequently, the correct variation, after which I ran with that variation, and found the boundaries of all the Scull surveys in that locality. With the exception of three, the tree corners were down. But the chain has much to do in finding corners, as it can easily stop us short of, or carry us by, the correct spot, and generally the error in distance is in the original measurement.

4. If a law were passed forbidding any one, without proper specified qualification, from practicing surveying, it would be a movement in behalf of property-owners and tax-payers.

5. During the summer I was called on to survey a tract of land in Shohola township, Pike county, surveyed in 1786 to William Denny, being by nine or ten years the oldest tract in that place—the land was then vacant all around it. This tract calls for eleven corners, four stone and seven tree corners. A stone corner is called for at each end of a seventy-one rod line, they being the only contiguous stone corners on the draft. With one exception, the rest call for white pine trees. As the adjoining tracts do not connect with the Denny on the ground as represented on the drafts, it was with great expense and labor that I finally found one of the stone corners of the seventy-one rod line, which, from its squatting, sunken, and dilapidated condition, had not been disturbed for half a century, and may not have been cared for, nor even seen, since the day it was built by the surveyor ninety-seven years ago. The other adjacent stone corner was easily found, but not a tree corner was standing. Nothing but the stumps were to be found; the trunks had been removed, or succumbing to time and the elements. I mention this circumstance to show the importance of "preserving intact the monuments."

* About thirty years ago I found the declination to be 4½°. Surveys made in this vicinity by James Scull, in and about 1769, do not admit, in most cases, of any variation, whilst those made about 1795 require an allowance of fully 4°.

PIKE.—John C. Westbrook, Junior.

BLOOMING GROVE, *October 29, 1883.*

1. A true meridian line was established in Milford in this county, marked by stone monuments sunken into the ground and projecting above the surface two or three feet; also, a standard measure for two-pole chains.

There is no record in the commissioners' office, that can be found, of its establishment, nor is there a book provided for the surveyor to record the variation of his compass.

2. Not knowing the date of establishment of the true meridian at Milford, and not finding any entry of the variation from time to time, I am unable at present to give any information in relation to this subject.

3. The variation on surveys, bearing date 1794, is four and a half degrees. The yearly change of variation for this place is about three minutes, or a very little over.

SCHUYLKILL.—P. W. Sheaffer.

POTTSVILLE, *September 22, 1883.*

1. Set stones, when law was first enacted, by Samuel Lewis and myself.

2. Have not tested it for years. Do not use compass.

3. Have not tested any lines for years, then with transit only.

4. Abolish use of compass, run lines with transit and rod, or, if compass is retained, run with rod. Not every surveyor can carry the right tree in his eye a long distance in the brush. Also check chainmen. No boundaries should be allowed to be set by the one owner. All adjoiners should be represented when stones are set or boundaries fixed.

SOMERSET.—J. Harry Fritz.

SOMERSET, *October 13, 1883.*

1. See my report on page 30 in your annual report of 1878, dated December 31, 1877.

2. See No. 4 in the above report. The variation December 31, 1877, was 3° , now, April, 1883, it is $3^{\circ} 20'$.

SOMERSET.—William Baker, C. S.

SOMERSET, *September 21, 1883.*

1. A meridian line was established in the court-house yard, Somerset, October, 1855, by George Mowry, Esq., by the erection of two metal posts set in large stones, about one hundred and ten feet apart, with a wooden post set in a large stone, midway between the metal posts, as compass stand. A standard measure is erected in the court-house hall for two pole chains. For variation of the needle from 1855 to 1878 see report of 1878, (page 31.) In 1880, the line was changed to its present location; its former location being between an iron fence and the court-house.

2. The average variation of all the instruments tested last April made the variation about $3^{\circ} 20'$. The average progression since 1880 is about $4'$ a year westward.

3. See my report of 1878, (page 31.)

4. I think a thorough triangulation of the State, and the lines adjusted thereby, is the only remedy. So long as needle surveys are made and returned, so long will the trouble exist. There are still a number of surveyors, "who call themselves such," in the county who never regard the act of 1850. I think that act should be amended, since only persons interested can make complaint under its provisions. It is at best only a patched-up job, and, in my opinion, should be superseded by something better.

TIOGA.—David Heise.

WELLSBORO', *October 5, 1883.*

1. No meridian line ever established in Tioga county.

5. The act of 1850, relating to meridian lines, having been passed so many years ago, without its provisions ever being carried out in many counties in the State, so that I believe there are many county commissioners that do not know that there is such a law in existence; that it may be necessary for the Legislature to pass a supplement to it, and by its provisions make it more urgent upon the county commissioners to carry out its provisions.

VENANGO.—G. M. Bowman.

FRANKLIN, *October 25, 1883.*

1. No meridian line.

4. An entire change in all laws on land surveys, and the adoption of the geodetic system, or something of the same nature, for the preservation of boundary monuments. Have the latitude and longitude of the north east corner given, and inserted in deeds of conveyance from grantor to grantee. Latitude and longitude to be computed from Greenwich, Washington City, or Harrisburg, as shall seem most expedient, or the county seat—either one of the first and the last. Abolish by law the entire use of the needle, except as follows: Two to four times, on each line taking mean of bearing, and compel all land surveyors to use a solar transit. This would rule out of the profession all quacks, who now bring disrepute on the profession; and let the proper fees of land surveyors be in proportion to the value of lands in each county, as per deeds or assessments of real estate, say one half to three per cent. of said values. Thus will the profession rise in dignity and influence, and take rank in the learned professions that it is entitled to; and also require the land surveyors to employ none but men skilled in chaining as their assistants, and to be sworn to make true measurement, and the surveyor to administer oath.

WARREN.—D. F. A. Wheelock, C. S.

LOTTSVILLE, *November 3, 1883.*

1. Our meridian line is located in the court-house yard, east of the court-house, in Warren borough. It was established in the spring of 1878—I believe the old one, established a number of years ago, having been de-

stroyed when the new court-house was constructed. It is marked by two stone monuments about eighty yards apart, set with base below freezing-point; but, on account of an iron fence surrounding the court-yard, it has been found necessary to produce the line some three or four hundred feet further north, in order to escape the influence of local attraction.

A standard measure for testing surveyors' chains has been fixed on the walls of the county jail in the court-yard.

2. The declination of the needle as shown by a Stackpole transit in April last, was $3^{\circ} 40'$ west. The same instrument showed in April, 1882, $3^{\circ} 36'$, and in April, 1881, $3^{\circ} 32'$, making an annual change of $4'$. No book being provided by the county commissioners previous to that time, we have no earlier reliable data. I believe, in a former report from this county, it was claimed that the annual change in the declination was $3\frac{1}{8}'$; but as the data were taken from different instruments, the calculations may not have been reliable, as I find different instruments show sometimes as much as fifteen or twenty minutes difference in declination at the same time and place.

3. My own experience in retracing a line run by myself six years ago is, that allowing for an annual change of four minutes, will retrace the former work, providing that the same instrument is used. The original lines run in 1793 and 1794 can, in general, be traced by allowing bearing of the needle of $3^{\circ} 45'$ west of the true meridian of the present time.

4. Perhaps the establishment of a meridian line near the center of each township would secure better work, if surveyors were compelled to adjust their instruments thereon before doing any work in the township; but still better would be the establishment of a base line in each township, and the requirement that as far as possible all work be done by the method of triangulation. Then, again, I deem it very necessary that a board of examiners should be established, and none allowed to practice the art of surveying unless he be properly licensed by the board, after a thorough and practical examination. This method would discard a set of "bunglers" who are continually causing trouble between land-owners and others. Without a system of this kind, I see no hopes of the profession ever becoming what is intended—a help instead of an *injury* to land-owners.

WASHINGTON.—J. M. Moninger, C. S.

WASHINGTON, Pa., October 3, 1883.

1, 2, and 3. See report of John W. Creigh.

5. I do not presume to suggest much to our surveyors. As a farmer I find fault with the carelessness and inconsistency of a class of accommodating surveyors. This is why I do it at all. Then, there should be some arrangement made to compel farmers and lot-owners to put in permanent corners, whereby they can be found, and keep them in position under a penalty. Much depends on a good instrument, (all lines run here by the needle,) so there is no advantage in a transit, ordinarily, except where local attraction exists, and that is very rare in the country here. Then firmly to follow

his needle and not his employer when they differ, and always take the necessary time to verify anything that is out of the supposed track. This is my practice, and if the people do not like it, try some one else.

WASHINGTON.—John W. Creigh, C. E.

WASHINGTON, Pa., November 13, 1883.

1. The meridian line was established in 1852 by Cooper Morrison, Esq., county surveyor. It is located in the campus of Washington and Jefferson College, Washington, Pa., and is marked by two stones, 8"×8", set deep in the ground, and are five hundred feet apart. Owing to grading of the campus the stones became displaced, and were re-run by Professor D. J. McAdam in 1876. There are many reasons to believe that there is an error in the present line, which will be examined into soon. Owing to an iron fence around the campus there is found to be five (5) minutes variation caused by local attraction.

2. The needle has been moving westward at the rate of 3' per year since its establishment, but the line now run would make it about an average of $7\frac{1}{2}'$ per year for six years.

3. From lines run nine years ago, with the same needle, I can only find the average of 5' per year.

4. I would respectfully suggest that a law be enacted so that each county should have a board of three surveyors, appointed by the Governor, to examine all persons who wish to engage in the profession, to see that they are capable of fulfilling the duties required of them. We find numerous parties, who are now running lines, fixing corners, &c., who do not understand the first principles of surveying, and the result is vexation, trial, and innumerable law-suits; and their prices are so low that no one who has made a thorough study of surveying can compete with them without lowering his professional dignity. We have over fifty surveyors in Washington county, and at our last meeting the question of such a law being passed came up, and of all that number, only three, including myself, were in favor of it. The opposition remarked that if such was the case many could not pass the examination; if it be so, *how can they make a correct survey?* I would also add, to have a law passed for the whole State allowing surveyors five dollars *per diem* while as witnesses on land cases. I believe only Philadelphia and Allegheny counties have such; the balance, one dollar per day.

WAYNE.—L. S. Collins, C. S.

CHERRY RIDGE, November 6, 1883.

1. There is no true meridian line established in this county. The attention of our county commissioners has frequently been called to the act of Assembly of 26th April, 1850, but no steps have as yet been taken by them toward establishing such a line. The commissioners appear to regard the matter favorably, and perhaps, ere long, our county will be provided with a true meridian line. There has been no record kept at the

commissioners' office of the declination of the needle since the old meridian line was destroyed by the construction of a new court-house, about 1876.

2. By an observation of Polaris when at its western elongation, taken November 3, 1882, with a W. & L. E. Gurley six-inch compass, vernier reading to minutes, with telescope sight attachment, azimuth angle, by computation, $1^{\circ} 45' 56''$ west; compass bearing $5^{\circ} 36'$ west of Pole star at western elongation. The reading was taken at half past six o'clock, A. M., making the declination at that date $7^{\circ} 21' 56''$ west. There may be an error in this single observation, and I presume the declination deduced is four or five minutes too great. If the declination given in 1876 was correct, viz: $6^{\circ} 45'$ west, then the mean annual progression for the six years to 1882, would be about 6.2'.

3. On July 10, 1882, at 2.30 o'clock, P. M., I took the bearing of a fixed line, N. $9^{\circ} 42'$ E., and on April 16, 1883, at 2 o'clock, P. M., found same line to bear N. $9^{\circ} 48'$ E., the difference in time being about nine months and difference in bearing 6', making at that rate about 8' progression for the year. I found this autumn that to retrace lines of warrants of 1773 near Delaware river in this county 3° , and lines of 1787 $3^{\circ} 35'$ was the correct variation to be allowed; on lines of 1821 there was at that time a variation of $\frac{1}{2}^{\circ}$, as I learn from the notes of the surveyor who made the surveys. There was, in May last, an allowance of $4^{\circ} 10'$ west necessary to accurately retrace the lines of the same lands. That is for sixty-two years a difference of $3^{\circ} 40'$, or a mean annual change of about 3.5'. Also, from notes of surveys on same lands, find the variation in 1836 had increased to $1^{\circ} 30'$ west, which, for the forty-seven years up to May, 1883, would make the mean annual change 3.4'.

[REMARKS.—A common source of error overlooked by most engineers and surveyors, and one to which many of the differences in the readings of needle instruments may be attributed, is that the meridian of the graduated compass-box does not coincide with the line of sight. This error can be corrected only by the instrument-maker, and should be avoided before any instrument leaves the manufactory.—J. S. A., *Sec. Int. Aff.*]

FINAL REPORT

OF THE

JOINT COMMISSION ON THE PENNSYLVANIA AND OHIO BOUNDARY.

HARRISBURG, *October 1, 1883.*

HON. J. SIMPSON AFRICA,

Secretary of Internal Affairs :

DEAR SIR :

In compliance with the requirements of the third section of the act entitled "An act in regard to the boundary monuments on the line between the State of Pennsylvania and the States of Ohio and West Virginia, with an appropriation for expenses of same," approved the 18th day of May, 1878, I have the honor to transmit, for filing in your department, the final report of the joint commission appointed by authority of said act to examine as to the true location of the monuments which mark the boundary line between the State of Pennsylvania and the State of Ohio, and to replace any monuments which have become dilapidated or have been removed from the boundary line between said States, together with the engineer and surveyor's report in detail, and a carefully constructed map of the line as laid down by the commission.

I am, very respectfully,

Your obedient servant,

JAMES WORRALL,
Chairman, Joint Commission.

REPORT OF THE JOINT COMMISSION

Appointed by the States of Pennsylvania and Ohio to ascertain and remark the boundary line between said States as it was originally established; said commission consisting, on the part of Pennsylvania, of James Worrall, James McCullough, and William W. Walker; and on the part of Ohio, of Joseph M. Rickey, James Mackey, and Henry B. Perkins.

Prior to the Revolution much uncertainty existed with regard to many of the colonial boundaries. Warm and even bloody conflicts took place between the inhabitants of the different colonies. This was especially true with regard to Pennsylvania and Maryland. To end the strife, England, in 1763, sent over Charles Mason and Jeremiah Dixon, both prominent English surveyors, to determine and mark the boundary between those colonies. With characteristic contempt for everything colonial, the stones designed to mark the line were shipped with the commission. At the period of the Revolution, and shortly after, there was a general effort made to settle State boundary lines. Pennsylvania at that date, jointly with the adjoining States, settled all, or nearly all, her boundaries. The joint commission appointed by the States of Virginia and Pennsylvania to determine their dividing boundaries, consisting, on the part of Virginia, of James Madison and Robert Andrews, and on the part of Pennsylvania of David Rittenhouse, George Bryan, and John Ewing, agreed August 31, 1779, that the southern boundary of the State of Pennsylvania should be Mason and Dixon's line, (north latitude $39^{\circ} 43' 26.3''$) extended west to a point five (5) degrees of longitude west of the Delaware river, and from thence, a line to be produced due north as far as the States extended, should be its western boundary. The action of this joint commission was ratified by Virginia, June 23, 1783, and by Pennsylvania, April 1, 1784, and declared to be "the boundary forever." Mason and Dixon's line was accordingly extended to the point indicated, by James Neville on the part of Virginia, and Alexander McClean on the part of Pennsylvania, surveyors. This line was tested and corrected by astronomical observations and permanently marked in 1784. The line denoting the western boundary of Pennsylvania was extended from the point agreed upon, north, as far as the Ohio river, in 1785; and in the succeeding year (1786) it was produced to Lake Erie, Andrew Ellicott being chief engineer. This latter (the survey of 1786) is the line to which this report mainly refers.

When the original survey was made, a large corps of axmen was employed and a vista was cut through the forest from twenty to thirty feet wide, and monuments of such stones as were at hand were erected at irreg-

ular distances. Thus marked, the line's position was indicated for the time, perhaps, with satisfactory plainness. But in process of time, this vista in many places disappeared; many of the monuments, also, which had been erected to mark the line, were by various causes removed, displaced, or destroyed, and some of those remaining rendered doubtful. For long distances, amounting in one instance to 28 miles, 347 feet, and in another to 33 miles, $2,324\frac{4}{10}$ feet, there was not an original monument (that had not been moved from its original position) left to indicate the line's true location.

The results of the uncertainty caused by this state of things were disputes, and, in some cases, angry quarrels between the parties on opposite sides of the line. A resort to litigation failed to settle the disputes, because no court or jury of either State, or both States combined, could legally determine the line's true location. In this vexatious dilemma the citizens of each State petitioned their respective Legislatures to appoint a commission, to jointly ascertain and re-mark the line as established in 1786. The Legislatures of both States responded favorably, and bills were passed by them directing their respective Governors to appoint said commission, (see appendix,) that of Pennsylvania approved May 18, 1878, and that of Ohio approved May 3 of the same year. Accordingly, the Governors of said States appointed the commissioners before named. These commissioners met at Pittsburgh on the 14th day of October, 1878, and organized by electing James Worrall, of Pennsylvania, chairman, and James Mackey, of Ohio, secretary. After full consideration of the subject, it was resolved to meet on the 28th day of the same month at Smith's Ferry, near the south end of the line, to commence the survey. In the meantime diligent effort was to be made to obtain a map, plot, or report of the original survey, its methods, and all the information obtainable concerning it. But neither in Richmond, Harrisburg, Columbus, or Washington city, could, at that time, any original map or field-notes of the survey of 1786 be obtained. Afterwards partial maps of the line as originally surveyed were found. It was therefore deemed advisable before assembling the entire surveying corps, in order to obtain fuller information in regard to the line and the monuments marking it, that one member of the joint commission from each State should visit each end of the line and ascertain the condition of the monuments there to be found, and determine at which point it would be best to commence the survey. James Mackey and William W. Walker were named to perform this duty. Accordingly, on the 28th day of October, they went to Smith's Ferry (Joseph M. Rickey accompanying them) and examined the monuments in that vicinity. James Mackey and William W. Walker crossed the Ohio river and examined a monument on the south side of it, on the boundary between Pennsylvania and West Virginia; they then passed to the north end of the line where, four miles and two thousand three hundred and forty feet from the bank of Lake Erie, was found an original monument believed to occupy its orig-

inal position, and, in view of all the circumstances, it was decided to commence the survey at the north end of the line. The 6th day of November of the same year was appointed as the time for commencing the work, and the other members of the joint commission were notified accordingly.

On the day appointed, (November 6, 1878,) all the members of the joint commission met at Conneaut, Ashtabula county, Ohio, near the northern terminus of the line. Here the preliminaries of the survey were arranged. On the recommendation of James Worrall, A. B. Leuffer, of Philadelphia, was appointed chief engineer, and the details of the survey entrusted to him. It was resolved to obtain the meridian of the monument before referred to, and produce it first north to Lake Erie, then south to the Ohio river, taking notes of all the important objects connected with or in the vicinity of the line; also investigating and carefully noting all the monuments and other evidences of the line's true position, as established by the survey of 1786. In conformity with these instructions, as the survey proceeded and an accurate measurement of the line was being made, topographical notes of important adjacent objects, both natural and artificial, were taken. Very many lateral measurements were made from the transit line to objects that could be relied on, to assist in determining the line's true location, or the boundaries of the original vista in which the line was located. Old settlers were interviewed, and all the information in this way obtainable was collected and recorded. These notes, investigations, measurements, and records, were made on behalf of the State of Ohio by Joseph M. Rickey and James Mackey, and on behalf of the State of Pennsylvania by William W. Walker. Copious notes were also taken by G. D. Hersey and T. A. Snyder, chainmen. All available means were used to ascertain, with the utmost possible accuracy, the exact location of the line laid down by the survey of 1786, and it is confidently believed that the efforts were successful and that the original line is substantially restored in the new, and will be thus accepted by those interested, and that all serious disputes concerning it will soon pass away.

It was deemed advisable in view of the fact that the bank of Lake Erie at the point crossed by the line, is being washed away at the rate of two or three feet per annum, to place the initial or most northern terminal monument from which the measurement and distances were reckoned, (which point in the field notes of the Survey and in this report is called zero,) a considerable distance from the lake, so that it would be in no danger of meeting the fate of its predecessor, placed there ninety-six (96) years ago, and which, though placed several rods south of the bank of the lake, was many years since undermined and had fallen down the bank. A spot was therefore selected for the site of this important monument two thousand three hundred and forty (2,340) feet from the top of the bank of Lake Erie, and two thousand four hundred (2,400) feet south from the water's edge.

When the survey reached twenty-two miles south of this point on the 6th day of December, 1878, snow fell fifteen inches deep; and as, just in

advance lay, largely covered with water, six miles of swamp, which one of the Western Reserve Surveyors of 1796 pronounced, after passing through it, "the most abominable swamp in the world," it was deemed unwise under the circumstances to attempt to proceed, and the party disbanded until a more convenient season.

On the first of January, 1879, W. W. Walker visited the swamp to ascertain whether or not it was so frozen as to allow the surveying party to pass over it on the ice. He found it was not, though the water had to a considerable extent drained off. He engaged parties in the vicinity to give notice when its condition would permit the prosecution of the survey. On the 15th day of the same month, it being deemed practicable, work was resumed; and by great and persevering effort, the line was extended through the swamp to a point twenty-seven miles four thousand six hundred and twenty and nine-tenths feet from zero, when, on the 22d day of the same month, the party again disbanded.

On the first of April, 1879, operations were resumed. It was deemed necessary by the commissioners present, to obtain a meridian at the point to which the line had been produced the preceding January, and our line corrected by it before advancing farther south. After several unsuccessful attempts in consequence of the very unfavorable weather, a satisfactory observation of Polaris was obtained and a meridian was established. Conforming the line to this meridian, it was extended south without cessation or adjournment until the 27th day of May, when, having reached the Ohio river, the southern terminus of the line, and connected it with the monument before spoken of, on the south side of the river, the initial survey being completed, the party disbanded.

It was the wish and design of the joint commission that meridians should be obtained at frequent intervals, as the survey progressed, and the line, if in error, corrected by them; but, owing to unfavorable circumstances, it was found impossible to do so; and in view of the great expense of delaying the corps, it was deemed advisable to proceed with the survey, taking meridians where practicable; and that afterwards, in favorable weather, two persons, one from each State, should pass along the line and take meridians at such places and make such investigations and revision of the transit line as should be deemed necessary to discover its errors, their location and amount, and to procure the data necessary for their elimination and the correction of the line. Accordingly, as the survey progressed, efforts were made to obtain meridians on the 2d, 16th, 22d, 28th, 33d, 41st, 48th, 52d, 55th, 63d, 66th, 80th, 85th, 88th, and 92d miles. Some of these efforts were successful, satisfactory observations of Polaris being obtained; others, owing to unfavorable circumstances, were not. It being evident to the joint commission that the appropriations made by the respective States were insufficient to complete the marking of the line, without which the survey already made would be useless, efforts were made to secure from each State the additional needed appropriations. Ohio responded promptly,

and an additional appropriation deemed at the time sufficient was granted; but in Pennsylvania, the Legislature of 1879 failed to provide the needed funds, and the immediate completion of the work was thereby prevented. This was unfortunate, and very much increased its cost, because time, with its many various influences, is always at work to produce change and destruction. In the two years of delay occasioned by this failure, so many of the stakes were removed, and other evidences of the position of the line left by the surveying party, that a resurvey of many parts of it was rendered necessary.

As soon as it was known that no immediate appropriation would be made by Pennsylvania it was deemed essential, in order to secure the benefit of the work already done, to immediately revise the line and take the necessary meridians. Consequently, on the 15th day of September, 1879, G. D. Hersey, a scientific gentleman in the employ of the Ohio commission, on behalf of the State of Ohio, and W. W. Walker of the Pennsylvania commission, on behalf of the State of Pennsylvania, commenced the proposed revision. They passed along the line, took twenty-three (23) meridians on it at different places, retraced much of it, searching out its deflections, ascertaining their exact location and amount—thus procuring the data necessary for its final correction. Six miles in the swamp and four at its northern extremity were not at this time revised, but their revision was deferred until August, 1881, when the same parties completed it, taking three additional meridians, and connecting the line with a station established by the United States Lake Survey, called the State Line Flag.

This revision required considerable time and much very careful work, both night and day, yet it could not be dispensed with as the data it furnished were essential to the correct establishment and mapping of the line. In connection with the revision the course of the line for considerable distances was obtained by night by lamps or signals erected at suitable stations. By this means, for example, views were obtained connecting the forty-second mile with the forty-eighth and the latter with the fifty-fourth. Other points were similarly connected, and these courses compared with meridians established at the stations of observation.

The above-mentioned investigations demonstrated that about sixty-two (62) miles of the northern part of the line of 1786 were not a true meridian, but deflected slightly into the north-west. The question whether a true meridian line should be adopted as the boundary, and marked accordingly, or the old line reestablished and marked was discussed by the joint commission—its chairman, James Worrall, and James McCullough of Pennsylvania, advocating the former position and the other members advocating the latter position, which was adopted; the line of 1786 being reestablished and re-marked.

On the 13th day of September, 1881, the revision of the line being completed and the Pennsylvania Legislature having, at its previous session, made the necessary appropriation, the joint commission met at the call of

the chairman at Pittsburgh, and after deliberation the following method of marking the line was adopted.

The most northern monument shall be placed at zero, the initial point of measurement as adopted by the survey, twenty-four hundred feet south of the edge of the waters of Lake Erie; and, as a rule, a monument shall be placed at the terminus of each mile, measuring south from that point to the Ohio river—the southern terminus of the line. Each monument, except the two extreme or terminal ones, shall consist of two solid sandstones; the one a cube, fifteen inches, on a side called, in this report, “the monument,” the other called the “index,” one foot square and three feet long. The monument (cube) to be placed invariably upon the line and sunk until its upper surface shall be about two feet below the surface of the ground. On the level and dressed upper side of each monument shall be cut a deep cross exactly on the line and at the terminus of each mile. When no highway lies on the line, the index shall stand upon the monument, with ten or twelve inches of its upper end above the ground, one foot of the upper end of the index to be dressed one foot square with an apex one inch high. On the north dressed face of each index shall be engraved the number of miles it stands from zero—with the letter M at the right hand of the figures. On the east side shall be engraven the letter P, on the west side the letter O, and on the south side “1881.”

Should the line lie along the highway, the index shall be set at right angles to the line, twenty-five feet either east or west of the monument. If to the west, “25 F” shall be engraven under the “P,” and if set to the east, the same shall be engraven under the “O” to show in either case the index is twenty-five feet either east or west of the sunk monument on the line.

These rules were observed with regard to all the regular monuments except five, those designed to mark the terminus of the nineteenth, twenty-third, twenty-seventh, sixty-fifth, and ninety-first miles, which were set at recorded distances from the regular position because the terminus of the mile was in a swamp or other unsuitable locality. Besides these there were placed upon the line three other monuments at irregular distances, one set upon a summit on the forty-second mile, another on a summit on the forty-eighth mile, and one on the sixty-fifth mile in the Mahoning Valley. (See field notes.) It was further determined that the two terminal monuments, one at each end of the line, should be of granite. The joint commission appointed Henry B. Perkins, of Ohio, and William W. Walker, of Pennsylvania, to superintend the work and prosecute it to completion.

Accordingly, on the 16th of September, 1881, the above-named commissioners visited Cleveland and examined different specimens of stone, consulted with the representatives of the different prominent companies operating the large stone-quarries in that vicinity, and finally contracted with the “Ohio Building Stone Company,” operating the North Amherst quarry, for the required sandstone monuments, said company agreeing to commence work upon and ship the stone immediately. It was desired to have

the stone shipped at as early a date as possible, so that their delivery from railroad stations to their points of designation on the line might be effected during the season of good roads. But the immense and unprecedented amount of business on the railways caused the most annoying delay of their shipment and delivery, so that the commencement of the work of placing the monuments on the line was delayed until the 23d day of October, at which date the work was commenced, William W. Walker having general supervision of the work and G. D. Hersey acting as engineer.

Notwithstanding earnest and unremitting efforts were made by Henry B. Perkins and William W. Walker to secure an early shipment of the monuments, they were not all delivered at the designated railroad stations, at the south end of the line, until the following December. This unexpected and vexatious delay greatly augmented the difficulty and expense of their hauling and final delivery.

It being the express wish of the joint commission that the work should be completed at as early a date as possible, it was prosecuted vigorously, with but two short intervals, until the 12th day of January, 1882, when, having set eighty-four monuments and built the foundation for the north terminal monument, the party was compelled to discontinue operations, as the stones near the south end of the line were not all delivered, and the condition of the roads was such as to render their hauling almost impossible.

After deliberation and consultation it was concluded that the terminal monument should be of the following dimensions: The base to be three feet square, eighteen inches deep, beveled around the top four inches back; the shaft to be placed thereon to be four and one half feet long and twenty-eight inches square at the base, and gradually tapering until within six inches of the top, then rapidly to a point or apex; to be of Quincy granite, dressed neatly but not polished, with inscription hereinafter referred to and explained.

When it was known that all the monuments had arrived at their destination, work was resumed. Commencing at the north end May 15, 1882, the granite monument was placed at the zero point upon the foundation built the preceding October. This foundation was built of sandstone, laid in cement five feet ten inches deep, four feet square at the top, and gradually enlarging toward the bottom. The cap-stone of this base is four feet square and twenty-one inches deep, its upper surface just below the surface of the ground. The granite monument erected thereon, base and shaft, weighs four thousand eight hundred pounds. It stands in the midst of a slight artificial mound, and on a very slight natural summit—the land descending both north and south. On the east side of the granite base is engraved the word “Pennsylvania,” and on the west side is engraved the word “Ohio.” On the north side of the shaft these words are engraved: “Erected in 1881 by a joint commission appointed by the States of Pennsylvania and Ohio to re-survey and re-mark the boundary line as established in 1786.”

Having completed the work at this place, the party proceeded to the south end of the line and set the seven remaining sandstone monuments from the eighty-fifth to the ninety-first mile inclusive, and built a base for the terminal granite monument, on which it was erected—the whole structure, the sandstone base, the granite base and shaft, including inscription, being a duplicate of the north terminal monument before described. On the first day of June, the party disbanded, leaving three monuments yet unset, viz: Those designed to mark the termini of the 25th, 27th, and 28th miles, their sites being under water when the other monuments in their vicinity were set. These were afterward put in position, and the entire work was finished by the same parties August 15, 1882.

ORIGINAL MONUMENTS.

While passing over the line in the recent survey, nineteen monuments, placed on it by the survey of 1786, were found, and satisfactory evidence of the former existence and approximate position of six others which had formerly marked it, but had been removed and lost. Of all these, only two gave satisfactory evidence that they occupy exactly the same position they did originally. Five have not been disturbed by human agency, and were substantially correct, having only been affected by frost and other natural forces, by which they were thrown more or less out of their original perpendicular position. Twelve had been displaced by human agency and replaced, and the remaining six had been removed, destroyed, or lost.

The following is a description of the above monuments, together with their former and present positions, as far as known, beginning at Lake Erie and numbering south. No permanent line marks were made by the re-survey on any of these monuments. Monument numbered one was found lying in a corner of a worm-fence, one hundred and ten feet from the top of the bank of Lake Erie, and one hundred and seventy feet south of the water's edge.

No. 1. Twenty-two hundred and thirty feet north from zero. The ground on which it originally stood was many years ago washed away, causing it to fall down the bank of the lake. It was drawn up and placed where it was found by the re-survey by the farmers owning the adjoining lands. As reset by the joint commission it stands on the restored line, at the north side of a highway called "Lake road," nineteen hundred and forty-seven feet north of zero, twenty-eight inches under and eight inches above the surface of the ground. It is a water-worn flag-stone, or slab, nearly three feet square and six inches thick. It bears on its side this inscription, placed there by the survey of 1786, viz :

"Pennsylvania,
1786."

No. 2. Four miles south of zero. An irregular, oblong, granite boulder, weighing perhaps four or five hundred pounds. On its south-east side was engraven a large capital letter "P." The testimony of citizens in the

vicinity, some of whom had been acquainted with its location for more than sixty years, all agreed that the stone stood substantially in its original position, and had always, by all parties, been regarded as indicating the true location of the line of 1786. From the center of this stone the initial meridian of the recent survey was produced north and south. To this monument the restored line was made to conform. Called in the field-notes the "Culver monument."

No. 3. Twelve miles and eleven hundred feet south from zero. Many years ago removed and placed in the foundation of a barn, and is not now to be seen.

No. 4. Thirty-two miles and three hundred and forty-seven feet south from zero. This monument is a large, egg-shaped granite boulder, with a large "P" engraven on its east side. It lies in an open field, and is believed to occupy, at least, very nearly its original position, and is one of the four standard monuments to which the restored line is made to conform. Called the "Brown Monument."

No. 5. Thirty-nine miles and three thousand and nineteen and one-half feet south from zero. Is a light-colored granite monument, which was displaced by passing teams, and lay in the corner of a fence for years, and was afterwards reset, as nearly as they could, in its former position by neighboring land-owners. There is a rough cut "P" on its east side. It stands on the restored line, having been moved one and seventy-seven hundredths feet west to conform to it.

No. 6. Forty-five miles and forty-two hundred and fifty feet south from zero. A large granite boulder lying in an open field. In 1828 it was made part of the foundation of a barn, and in renewing the foundation in 1881 it was removed, and the large "P" cut upon it by the survey of 1786, which indicated its character, was discovered.

No. 7. Fifty miles and forty-nine hundred feet south from zero. This monument is lost and its character unknown.

No. 8. Fifty-four miles and thirty-five hundred and ninety-five feet south from zero. Supposed to be a large granite boulder, yet to be seen, found in wheel-way of public road; but if genuine, the "P" is too much effaced to be identified with certainty.

No. 9. Fifty-five miles and five thousand feet south from zero. Sandstone, marked with the usual "P," but lost.

No. 10. Sixty miles and fourteen hundred and fifteen feet south from zero. Many years ago placed under the corner of a house and not now visible.

No. 11. Sixty-two miles and fifteen hundred and sixty and two-tenths feet south from zero. An undressed granite rock, about one hundred and two feet south of its original position, having been removed many years ago to make a farm corner; "P" on its east side; moved east nine inches to conform to the restored line. Called the "Shiehy Monument."

No. 12. Sixty-five miles and twenty-six hundred and seventy-one and

four-tenths feet south of zero. This is one of the two monuments believed to occupy exactly their original position. It is a granite boulder, supposed to weigh six or seven hundred pounds, so buried that its upper surface is level with that of the ground. The line of 1786 seems to have passed over it, and the "P," usually cut on the east side, was placed on its upper surface. It lies on the first summit south of the Mahoning river. The restored line crosses this stone at the foot of the stem of the "P." Called the "Barkley Monument."

No. 13. Sixty-seven miles and five thousand and thirty-six feet south from zero. Long since displaced or lost.

No. 14. Sixty-nine miles and seven hundred and seventy-two feet south of zero. Stands in the middle of a highway; was at one time removed by order of an Ohio path-master, and afterwards, when the "P" upon it was discovered, it was replaced, and the side marked "P" was turned towards the west. It is on the line. Called the "Bayer Monument."

No. 15. Seventy-one miles and twenty hundred and twenty-two and one-half feet south from zero. A comparatively small stone, nearly round, marked "P" on east side, buried in the middle of the highway. Like the former, it was at one time removed and afterwards replaced where it now lies, buried on the line. Called the "Fosnot Monument."

No. 16. Seventy-three miles and thirty-eight hundred and sixty-eight and one-half feet south of zero. An irregular, comparatively small sandstone, but slightly sunk in the ground; marked "P" on the east side; believed by neighboring citizens to be but slightly, if at all, removed from its original position. Called the "Lafferty Monument." Moved thirteen and one half inches east to conform to the restored line.

No. 17. Seventy-four miles and seventeen hundred and forty-one feet south of zero. An indifferent sandstone, under the corner of a fence, marked "P."

No. 18. Seventy-six miles and twenty-four hundred and seventy-one feet south of zero. Similar to No. 17. Found by Henry Long lying at the east side of the highway, and removed by him to his door-yard for a "relic," where it remains.

No. 19. Seventy-nine miles and three hundred and eighty-six and one-half feet south from zero. A sandstone seemingly quarried and roughly dressed into its present shape. It is about three feet long, sixteen inches broad, and six inches thick. Under the "P" on the east side is engraven the figures "77," and on a small stone buried at its eastern base are cut the letters "A. E." It was once displaced to accommodate a threshing-machine. It was moved three feet and three and five-eighths inches west to the established line. It stands on the first summit south of the Pittsburgh, Fort Wayne and Chicago railroad. Called the "Hartshorn Monument."

No. 20. Eighty-two miles and three hundred and seventy-three and seven-tenths feet south from zero. Is a roughly dressed sandstone similar to the preceding, marked "P" on its east side. Stands on the first summit south

of Little Beaver creek, about three hundred feet above the stream. The summit commands a beautiful view of the surrounding country. The monument leaned somewhat, but is believed never to have been moved by human agency until adjusted by the recent survey three and one half inches west to conform to the established line. Called the "Booth Monument."

No. 21. Eighty-five miles and four hundred and fifteen and four-tenths feet south of zero. This is a slightly dressed irregular sandstone slab fourteen inches high above ground, sixteen inches broad at the surface of the ground, and four inches thick. It is deep set on perhaps the highest summit on the line. It stands erect and quite firm in dry, gravelly soil in a forest, and all the evidence harmonizes with regard to it to the effect that it occupies exactly the same position in which it was placed by the survey of 1786. Consequently, it was accepted as denoting the exact meridian of the line which passes through it, and also through No. 12. To this line all the original and other monuments from the eleventh to the southern terminus of the line were made to conform. It is marked "P" on its east side. Called the "Beaty Monument."

No. 22. Eighty-six miles and twenty-two hundred and seventy feet south of zero. Is a small sandstone, the top of which is broken off horizontally, leaving only the stem of the "P" on the monument. The upper part is lost. It was maliciously displaced some years ago, and afterwards the citizens in the vicinity replaced it as nearly as possible in its original position. It was moved three and one half inches east to conform to the established line. Called the "Hamilton Monument."

No. 23. Eighty-eight miles and twenty-six hundred and sixty-four and seven-tenths feet south of zero. A sandstone, thirty inches long, twenty inches wide at the base, thirteen inches at the top, and six inches thick. Was once displaced by passing teams and afterwards replaced by adjoining land-owners. Moved nine inches west to the restored line. Called the "Fisher Monument."

No. 24. Ninety miles and twenty-two hundred and forty-eight feet south from zero. A roughly-dressed sandstone, nearly four feet long, eighteen inches wide, and seven inches thick. Though it leaned considerably to the north-west, it had not been tampered with. Marked with usual "P," on the east side. Straightened up to conform to the established line. Called the "Hood Monument."

No. 25. Ninety-one miles and twenty-four hundred and sixty-six feet south of zero. Lying near the line. Marked "P." Re-set on the line.

The four standard monuments to which the restored line was adjusted was the second, fourth, twelfth, and twenty-first, as before stated. Commencing at the south end of the line, at the Ohio river, or at the original monument before referred to, on the south side of the river, which was ascertained to stand on the meridian of the restored line, and tracing it north, the line passes through the twenty-first and twelfth monuments, their position being accepted as indicating the exact location of the original line of

1786. This line being a true meridian, is produced to the terminus of the sixty-second mile from zero. Here the course slightly changes, and a divergence of one and sixty-nine hundredths of a foot per mile into the north-west is introduced. This direction is maintained through the fourth monument to the terminus of the thirty-second mile from zero, where another angle is introduced, increasing the divergence to one and eighty-five hundredths of a foot per mile. This direction is maintained through the second monument to the northern terminus of the line at Lake Erie.

All of which is respectfully submitted, together with a map, made by G. D. Hersey, of the line as surveyed and marked with monuments, and which is intended as a part of this report.

Commissioners on behalf of Ohio.

February 1, 1883.

NOTE.—A report in detail of George D. Hersey, Engineer for the Joint Commission, of the re-survey of the boundary line, accompanied the report of the Commission, and has been filed therewith. SEC. I. A.

Filed in the Department of Internal Affairs of Pennsylvania, October 1, 1883.

J. SIMPSON AFRICA,
Secretary of Internal Affairs.

REPORT OF PROGRESS

ON THE

NEW YORK AND WEST VIRGINIA BOUNDARY LINES.

OFFICE NORTHERN AND WESTERN BOUNDARY COMMISSION,
HARRISBURG, *December 1, 1883.*

Honorable J. SIMPSON AFRICA,
Secretary of Internal Affairs:

SIR: I have the honor to present "Reports of Progress" on the Northern and Western Boundaries of the State, in compliance with the acts authorizing their revision.

You have received the report on the Ohio boundary completed.

The meridional portion of the line between Pennsylvania and West Virginia is set and a considerable portion of the southern boundary explored, (between the W. end of the parallel and the Maryland corner.) In this duty, as you will perceive, we have availed ourselves of the assistance of the U. S. Coast and Geodetic Survey, and we feel very confident that the work, as far as it has progressed, has been well done.

A report in detail, with maps, is in the course of preparation, which will fully convey all the information which has been obtained.

I also submit the report of Major H. W. Clark, C. E., in charge of the Northern Boundary Survey, concurred in by Col. C. M. Gere, one of our commissioners and engineer of the line on the part of Pennsylvania. Some one hundred and forty miles of the line from the east end in length is marked as stated in the report, and the coming spring season will find the engineers early in the field marking the remaining eighty-four (84) miles of parallel and some twenty (20) miles of meridian.

I am very respectfully, your obedient servant,

JAMES WORRALL,

*Chairman, Northern and Western Boundary Commission, on the part of
C. M. Gere and R. W. Torrey, Northern Boundary, and W. W. Walker,
and James McCullough, Western Boundary.*

REPORT OF ENGINEERS ON NEW YORK LINE.

Col. JAMES WORRALL,

Chairman of the Joint Boundary Commission :

SIR : I have the honor to present a memorandum report of our operations the past season upon the boundary line between New York and Pennsylvania.

Owing to various delays, we were unable to resume operations until nearly 1st August last. Immediately upon receiving the instructions of the joint commission, the monuments for the west half of the boundary, which had been lying over a year in the quarry, were ordered to be shipped, and our party was directed to assemble at Lanesboro', Pennsylvania, prepared to commence active operations. The field work was taken up 31 July, west of the Susquehanna river, preparatory to fixing the positions of the monuments between the west river monument and milestone 15, which had been set the year before.

The work during the months of August and September was of a fragmentary character, the time being occupied in adjusting the line and setting the monuments in the gaps left in the work of 1882. As at all of these points the boundary was in a very dilapidated condition, great care was necessary in reviewing it, and progress was correspondingly slow. The portion along the north line of Susquehanna county, where the existing monuments were few and far between, required careful study.

The point at which we suspended operations in 1882, was reached toward the end of September, after which very fair progress was made westward, and all the monuments east of (and including) milestone 139, with the exception of one highway monument, were placed in position.

West of milestone 139, for sixteen miles, but two of the original stones remain in place, and the boundary in this interval is in a doubtful situation at many points. A careful resurvey of this entire interval will be necessary before monument points can be fixed or any monuments set. I had commenced upon this when obliged to suspend by bad weather, 26 October, at a point upon the north-westerly side of the valley of Honeoye Creek, between the 141 and 142 mile-points.

The reconnoissance of 1878 developed the existence of an abrupt deflection in the original boundary to the south at the 141 mile-point, which is situated upon the bottom land of the Honeoye Creek valley. This deflection has created a great deal of confusion in local surveys along the boundary, and has been the cause of considerable litigation, and it is quite desirable that the boundary here should be carefully studied before it is finally adjusted.

The number of monuments set the past season was 97, of these 43 were milestones. These include milestone 144, which was replaced with a new monument before we left the line; including also milestone 20, set in 1882 which was taken up and reset at a point further west, so that its position might correspond more nearly with the inscription upon the orig-

inal first latitude stone at $20\frac{3}{8}$ miles; and including milestone 59, set in 1881, which had been broken just below the surface of the ground, and which was taken up and replaced with a new monument. Of the mile-stones, 23 were at points from which the original monuments had been removed; 18 of these were upon the north line of Susquehanna county.

We left the field 1 November, after spending a day or two at the eastern extremity upon the Delaware river, making a careful survey for the location of a large initial monument.

The weather during the time we were in the field the present season was not as favorable for out-door operations as during the season of 1882. Delays occasioned by storms were of frequent occurrence.

Our team and driver and one extra man were left on duty upon the western portion of the boundary, hauling the monuments which have been shipped the past season from the various railroad stations at which they were delivered, to convenient points upon the boundary. This service they will not complete before the middle of December. Most of the monuments have to be hauled long distances, and the roads at many points are of quite indifferent character.

. Arrangements are all perfected for an early resumption of operations next season. It is my purpose to take up the work where it was left, as soon after 1 April as the weather in the mountainous region will permit. For forty or fifty miles west from milestone 139, the boundary is in a very mountainous region, a greater portion wild and covered with woods, and the snow may lie upon the ground until nearly May 1st. If we can have an early start, I see no reason why the work in the field cannot be entirely completed before the next winter.

The section between milestones 139 and 155, from its dilapidated condition, will occasion delay. So also will the western 25 or 30 miles of the parallel boundary, where so many of the original monuments have disappeared. Upon the other portions of the parallel boundary, the unoccupied intervals are so short that they will delay progress but little.

The meridian boundary was found upon the reconnoissance to be deficient, almost entirely in original monuments, and it is a question in my mind if it be not best to entirely rerun this portion in the meridian of its initial point, before any monuments may be set. In whatever manner it may be decided to adjust this section, it will require time and care in its consideration.

The two terminal monuments decided upon by the joint commission have been ordered, and it is expected that they will be delivered at the sites early in the coming winter, so that they may be set at any time next season.

The final maps, records, and notes for the eastern portion of the boundary, embracing Wayne, Susquehanna, Bradford and Tioga counties in Pennsylvania, and Broome, Tioga, Chemung, and Steuben counties in New York, will be prepared the coming winter, and then, with the exception of

the large terminal monument at the initial point, this portion of the boundary may be considered finished.

H. W. CLARK,
Civil Engineer.

SYRACUSE, 20 November, 1883.

I concur in the preceding report.
C. M. GERE.

REPORT OF ENGINEER ON WEST VIRGINIA LINE.

CHARLOTTESVILLE, Va., November 29, 1883.

Col. JAMES WORRALL, *Chairman West Virginia and Pennsylvania Boundary Commission, Harrisburg, Pa.:*

DEAR SIR: Your favor of the 26th was forwarded to me on yesterday, and I hasten to furnish the preliminary report you request.

The party assembled at Smith's Ferry on May 2nd, but was not fully organized and equipped with instruments till Saturday, the 5th. On the following Monday and Tuesday nights astronomical observations were made for determining the meridian, and the line was properly started through the apex of the granite monument marking the south boundary of Ohio and Pennsylvania. The center of the first old stone on the West Virginia side was eight inches west of this meridian, and at nearly four miles from the granite monument it struck an old line stone. South of this point the old line diverged rather systematically from the meridian, bending to the west nearly at the rate of two-thirds of a foot per mile for a distance of forty-six miles; after which the bend to the west increased to the S. W. corner, being at the rate of nearly one and two-tenths feet per mile.

At a distance of eleven miles from the first old monument, the meridian was tested by azimuth observations and found correct, and again at fifty-four miles, with the same satisfactory result. From the twelfth mile a series of long sights were obtained, varying in length from seven to eleven miles. Five sights carried us about forty-three miles. The line adopted at the Pittsburgh meeting of the joint commission on July 3rd, and marked with substantial stone monuments, may be thus defined: That portion between the Ohio and Pennsylvania granite monument and the stone south of the Ohio river, marking the north end of the West Virginia boundary, lies in the meridian passing through the apex of the granite monument. From the first monument south of the Ohio river to the south-west corner of Pennsylvania, a distance of nearly sixty-four miles, the boundary is a straight line, deflecting from the meridian at the rate of about ten inches (or 3.3'' of arc) per mile. Not only is the boundary marked, but the meridian also, with five additional monuments which will be of great service to local surveyors in testing their compasses, besides being a means of preserving the boundary itself, as the distances of all the monuments on the boundary are known from the meridian. The meridian boundary party was disbanded the last week in June.

While observing latitude at the Ohio and Pennsylvania monument in July, it was found very convenient to connect the telegraph circuit with Louisville, Kentucky, where a coast and geodetic survey party was engaged in making longitude determinations. Two nights' exchange of longitude signals were made, when the strike of the telegraph operators put an end to this work. We have, however, a fair determination of the longitude of the boundary.

After leaving Smith's Ferry, I proceeded to observe latitude at the S. W. corner of Pennsylvania, and at four other stations on the south boundary, dividing the line between the S. W. corner and the Maryland corner, a distance of about fifty-four or five miles, into four sections. Upon the completion of this latitude work, the party was again organized during the last week in September, for tracing the south boundary by means of tangents and offsets. Thirty-five miles of this work was done, when it was deemed prudent to discontinue operations, as funds were running low,* and considerable outlay had yet to be made for marking that portion of the boundary already traced. For twenty miles the old boundary was quite uniform, deviating very little from the theoretical parallel of latitude passing through the S. W. corner. But at that point the line makes a decided bend to the south, which is, however, consistent with itself for ten miles, when it bends again to the north for the remaining five miles surveyed, tending towards the true course. The greatest deviation from the theoretical course in the first twenty miles is about ten feet, and in that distance, five authentic mounds or stakes were recovered. These marks enabled us to adjust the boundary with very little deviation from the acknowledged line, and this portion has been marked permanently with thirteen stones.

On the last fifteen miles of the line traced, were found nine authentic mounds, but as the bend was so decided it was thought best to only mark the tangents on this part, so that the commission might judge as to the propriety of straightening it. Before any steps can be made towards rectifying this part of the line, it will be necessary to complete the survey to the Maryland corner, a distance of nineteen or twenty miles, so that the condition of the entire bend may be clearly shown. The greatest deviation of this crooked boundary from the theoretical curve is about one hundred and seventy-five feet.

A full description of the entire survey and condition of the boundary will be given in my final report, which is now in course of preparation, as are also the maps to accompany it.

Yours respectfully,
C. H. SINCLAIR.

*The amount available for the West Virginia boundary being per mile less than one half the cost of the line between Ohio and Pennsylvania completed.

THE GEODETIC TRIANGULATION IN PENNSYLVANIA.

By permission of the Superintendent of the U. S. Coast and Geodetic Survey, the following account has been prepared by Prof. Mansfield Merriman, of Bethlehem, Acting Assistant in present charge of the triangulation.

During the past nine years the United States Coast and Geodetic Survey, under the authority of congressional enactment, has carried on in Pennsylvania the operations of a geodetic triangulation. As the field-work has been limited to two or three months in each year, the progress has not been rapid, yet it is believed that sufficient results have now been attained to render a statement concerning them of interest and value.

On the accompanying outline sketch of Pennsylvania are marked the stations and triangles as they exist at the present time. The stations are indicated by a point inclosed within a small circle, and to each is attached its name. The lines inclosing an angle are drawn full when that angle has been measured, and broken when it is yet unmeasured. It will be seen that within the limits of the State there now forty stations.

The seven stations, Principio, Meeting-house, Bethel, Yard, Willow Grove, Newtown, and Mt. Rose, belong to a chain of primary triangles (not shown on the sketch) which connects the measured base on Long Island with that on the Chesapeake Bay. From these measured bases, the horizontal angles, and astronomical observations, the positions of these seven stations were many years ago accurately determined. The latitude and longitude of each is known, as also the azimuth and distance from each to the next. On the sketch is drawn a heavy line connecting the two stations Principio and Meeting-house, and also one joining Newtown and Mt. Rose. It is from these two fixed primary lines that all the Pennsylvania triangulation has been computed.

The field work of the survey was in charge of Prof. Lewis M. Haupt from its inception in 1875 to the close of the season of 1880. During that period he laid out the triangulation as represented in the sketch and measured the angles at thirteen stations. An interesting account of the methods of reconnoissance and triangulation is given by Prof. Haupt in the Proceedings of the Engineers' Club of Philadelphia, Vol. I, page 215.

It will be noticed that the main chain of triangles, starting from the line Principio-Meeting-house as a base, curves around in a horse-shoe shape to the other base, Newtown-Mt. Rose. The angle measurements on this chain having been completed in 1882, it was adjusted by the computing division

of the Coast and Geodetic Survey office, and the geographical positions of the stations determined.

Below is given a brief statement of the location of the thirteen stations of this chain situated in Pennsylvania; they are usually marked by stone monuments or by bolts in the rock, and are well known by the people of the vicinity. For each station is given its latitude, its longitude west of Greenwich, the azimuths, or directions, to the neighboring stations, and the distances in meters. The azimuths are reckoned from 0° around to 360° , south being 0° , west 90° , north 180° , and east 270° .

Rawlinsville Station.—This is situated near the village of Rawlinsville, in the eastern part of Martic township, Lancaster county:

Latitude, $39^{\circ} 53' 09''.539$.		Longitude, $76^{\circ} 15' 58''.372$.	
To Gov. Dick;	azimuth, $158^{\circ} 02' 34''.80$;	distance, 43157.9 meters.	
To Womelsdorf;	" $187^{\circ} 00' 42''.54$;	" 49061.4	"
To Beartown,	" $224^{\circ} 49' 08''.81$;	" 30584.1	"
To Londonderry;	" $274^{\circ} 06' 10''.43$;	" 33073.2	"

Londonderry Station.—This is situated in the township of the same name in Chester county:

Latitude, $39^{\circ} 51' 50''.507$.		Longitude, $75^{\circ} 52' 50''.442$.	
To Rawlinsville;	azimuth, $94^{\circ} 21' 00''.25$;	distance, 33073.2 meters.	
To Beartown;	" $154^{\circ} 50' 11''.19$;	" 26637.8	"

Beartown Station.—This is situated in Salisbury township, Lancaster county, about two miles east of Greenbank post office:

Latitude, $40^{\circ} 04' 51''.947$.		Longitude, $76^{\circ} 00' 48''.491$.	
To Rawlinsville;	azimuth, $44^{\circ} 58' 53''.47$;	distance, 30584.1 meters.	
To Gov. Dick;	" $116^{\circ} 05' 56''.04$;	" 41916.6	"

To Bake-Oven;	" $72^{\circ} 39' 07''.24$;	" 27535.3	"
To Haycock;	" $335^{\circ} 04' 45''.50$;	" 40889.5	"

2

January, 1884.

Haycock Station.—Situated in Haycock township, Bucks county :

Latitude, $40^{\circ} 29' 18''.963$. Longitude, $75^{\circ} 13' 10''.341$.

To Tipton ; azimuth, $83^{\circ} 17' 07''.53$; distance, 39305.5 meters.

To Big Rock ; " $114^{\circ} 40' 53''.66$; " 20351.4 "

To Smith's Gap ; " $155^{\circ} 12' 42''.13$; " 40889.5 "

The positions of the four primary stations, Bethel, Yard, Willow Grove, and Newtown, are also accurately known, thus making seventeen stations in Pennsylvania whose geographical positions are definitely fixed. In addition, the stations Winterstown and Round Top have been occupied, and the stations Dauphin, Swatara Gap, Bear's Head, and Pimple Hill have been observed upon from two or more points, so that their positions are approximately known. The other stations marked on the sketch have been selected on reconnoissance, but are not yet definitely marked.

Numerous angle measurements have also been made of the directions to church spires and prominent buildings, in the principal towns and villages of the region covered by the triangulation, and whose positions have thus become known.

TO DETERMINE THE TRUE MERIDIAN WITH ORDINARY INSTRUMENTS, EITHER BY NIGHT OR DAY OBSERVATIONS.*

By Prof. LEWIS M. HAUPT,
Professor of Civil Engineering, University of Pennsylvania.

Since compass surveys are so unreliable in consequence of the diurnal, local, annual, and secular variations, it becomes a matter of vital importance to the surveyor and engineer to be able to eliminate these errors and uncertainties by referring all his lines to the true meridian.

But this involves a knowledge of subjects not generally included in the course of practical training of the county surveyor, yet by no means beyond his comprehension. The subject is usually approached by the novice with a certain amount of dread because it is believed to be difficult, but it is thoroughly practical, and it is hoped in this contribution that by laying aside, as far as possible, all mathematical encumbrances it may be made perfectly clear and intelligible to the average reader.

We will consider briefly 1st the *difficulties*, 2nd the *principles*, 3rd the *instruments*, 4th the *practical applications*, 5th the *results*.

The Difficulties.

Although much has been written on the several methods of determining a true meridian, the various steps are so mutually dependent that to the

*Reproduced from "The Topographer, His Instruments and Methods," published by J. M. Stoddart, Philadelphia, New York, and London.

beginner there seems to be neither beginning nor end, thus he learns that he must have the latitude of the place of observation to find the meridian, and the meridian must be known to find the latitude, so he immediately despairs of success and reverts to his old compass-bearing with a sigh of relief.

The latitude can readily be determined without knowing precisely where the meridian point falls, by simply reading a vertical angle to a star in a certain position which can be found near enough by eye, as will be hereafter described. This method of finding the latitude can only be used by night when the sky is not overcast by clouds.

Another difficulty arises from the fact that there is no star just at the pole or point where the axis of the earth pierces the celestial sphere, and that the stars appear to revolve around it, making any observation on them dependent upon the time. This can readily be removed by making the observation when the apparent motion east or west is nothing. Since the star appears to move in the circumference of a circle, if it were possible to take pointings at the time when it is at the point farthest east, and twelve hours later when it is farthest west, the line bisecting these directions would be a true north and south line, but as one of the observations would generally come in the daytime it cannot be used. A compromise may be effected by reading to one of the points and turning off an angle called the *azimuth* for the position of the meridian point.

To understand this method we must give a few elementary definitions: A *meridian* is the circle cut from the earth's surface by a plane passing through the poles and the place of the observer. Hence, all points north and south of the observer will be on the same meridian, and all points east and west will be on different meridians—each having a meridian of its own. As the earth makes one revolution of 360° in about twenty-four hours, it is evident that in one hour it will move through 15° , and in one minute through $15'$ of arc, &c., so that distances east and west may be expressed in degrees of *longitude* or in *hour angles*, measured on a parallel to the equator from any assumed meridian, as that of Greenwich or Washington. The *latitude* of the observer is his distance (in degrees of arc) north or south of the equator.

It follows from the above definitions that to all observers on the *same* meridian the sun or star will cross the line, or make its *transit*, at the *same time* of the day or night, while it will appear to them to be at different heights or *altitudes*, for the altitude is measured from a horizontal plane supposed to pass through the earth's center. This plane is called the *celestial horizon*, and it is always perpendicular to the radius drawn to the point of observation. Hence, if the observer were at the equator, his horizon would pass through the poles, and the altitude of the pole would be zero. As the observer travels north, his horizon, always 90° away from him, falls below the pole just as many degrees as he moves north. When he has gone 5° north, the horizon has fallen 5° below the pole—or, in other words, the

altitude of the pole is 5° or just equal to the latitude. This valuable principle enables us readily

To Determine the Latitude,

by making an observation on the sun or star when crossing the meridian. And since, when crossing, it is at the *highest point*, it is not necessary first to know the meridian, but simply to follow the motion of the star as it ascends in its orbit, if it be an upper transit, and appears to move along the horizontal wire of the telescope. The reading at the highest (or lowest) point will be the meridian altitude of the star. Since, however, the star is not at the pole, but a known distance away, this distance must be subtracted from the upper or added to the lower transit to obtain the altitude of the pole, or its equal, the *latitude of the place*.

Refraction.

As all rays of light are bent downward in passing out through the atmosphere, thus increasing the apparent altitude of objects, it is necessary to make a correction for this refraction, and since the amount of the refraction varies with the altitude, becoming zero at the *zenith*, or point overhead, it has been computed for various vertical angles and tabulated. The observed angle is therefore corrected by reference to the table of refractions as will be hereafter more fully explained.

The Method by Night Observations.

The meridian is determined by night by sighting to some circumpolar star, usually *Polaris*, at the time when it is at its eastern or western elongation. This time is readily determined by reference to Fig. 1, showing the relative position of *Polaris* and of the seven bright stars in the constellation of the dipper. It will be seen that the two extreme stars at the end of the bowl point towards *Polaris* and that the north pole is between them, also that the line joining *Polaris* and *Alioth* is horizontal at the time of the elongation, and that *Polaris* is west when the dipper has its handle down, and east, when up. Three positions are shown on the figure in which the corresponding stars are indicated by similar symbols. The direction of the apparent motion is also shown by the arrows. In the upper semi-circle it is from east to west, and in the lower the reverse. At the N. and S. points it is moving at right angles to the meridian and hence is only on it for an instant, whilst at the E. and W. points its motion is for some time nearly parallel to the meridian, so that the precise time of the elongation need not be known. These conditions are reversed in making an observation for altitude to determine the latitude as before described.

Having obtained a pointing on the star, say at its western elongation, turn off the *azimuth* to the right or east and the instrument will be pointed on the meridian. This azimuth angle increases with the latitude, and can readily be computed by solving the right-angled spherical triangle, formed by the place of observation, the pole, and the star, knowing the co-latitude

of the place and co-declination or polar distance of the star.* The accompanying table gives this angle at once for any meridian and for latitudes varying from 26° to 50° north.

Azimuth of North Star (Polaris, *α Ursæ Min.*) at either Elongation North, (Latitude, 26° to 50°.)

To Find the Latitude.

As will be seen from a glance at the table, it cannot be used until the latitude is known. This is found, as already intimated, by watching the stars Polaris and Alioth until they are very nearly in a vertical line, as indicated by the black dots of Fig. 1, either direct or inverted. In the former case it is the *upper*, in the latter, the *lower transit*. By setting the horizontal wire of a transit on the star and reading the vertical angle, we have the *observed altitude of the star*. From this subtract the refraction set opposite to it in the following table for the *corrected* altitude, and deducting from this remainder the star's polar distance (1° 19' 13'' for Polaris) gives the altitude of the pole or *latitude required*.

Refraction Table for any Altitude within the Latitude of the United States.

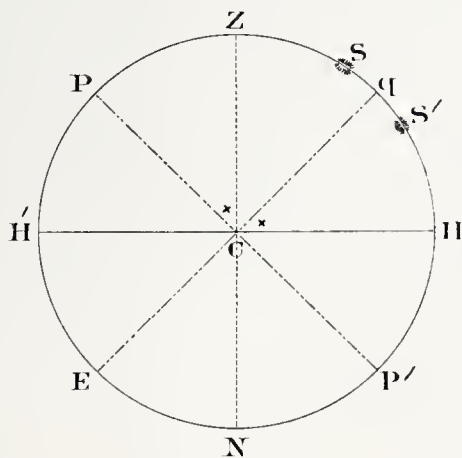

APPARENT ALTI- TUDE.	Refraction <i>Minus.</i>	Apparent altitude.	Refraction <i>Minus.</i>
25°	0° 2' 4.2''	38°	0° 1' 14.4''
26	1 58.8	39	1 11.8
27	1 53.8	40	1 9.3
28	1 49.1	41	1 6.9
29	1 44.7	42	1 4.6
30	1 40.5	43	1 2.4
31	1 36.6	44	1 0.3
32	1 33.0	45	0 58.1
33	1 29.5	46	0 56.1
34	1 26.1	47	0 54.2
35	1 23.0	48	0 52.3
36	1 20.0	49	0 50.5
37	1 17.1	50	0 48.8

It is a little more accurate to find the altitude by taking the complement of the observed zenith distance, if the vertical arc has sufficient range. This is done by pointing first to Polaris when at its highest (or lowest)

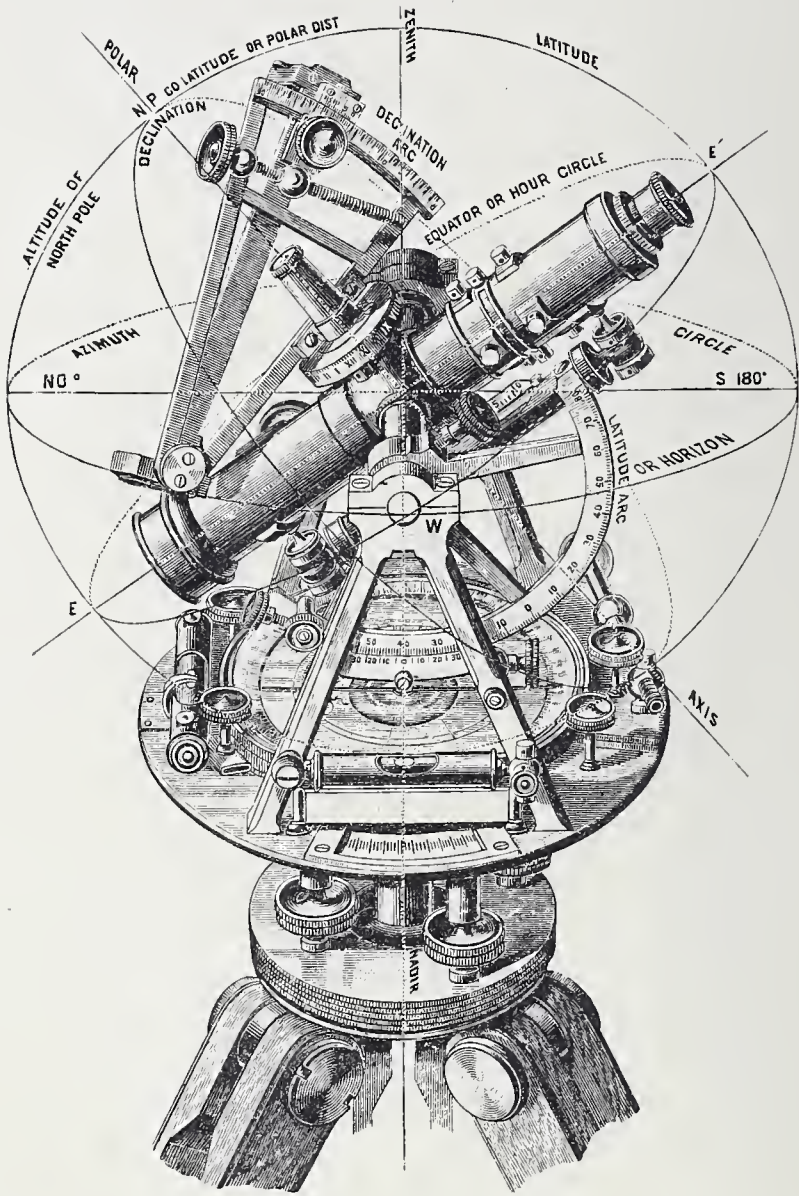

*The formula is $\sin. z$ (azimuth) = $\frac{\sin. \text{polar distance}}{\sin. \text{co-latitude}}$ but the annexed table will prevent the necessity of a computation. It is good for any meridian, but varies with the latitude.

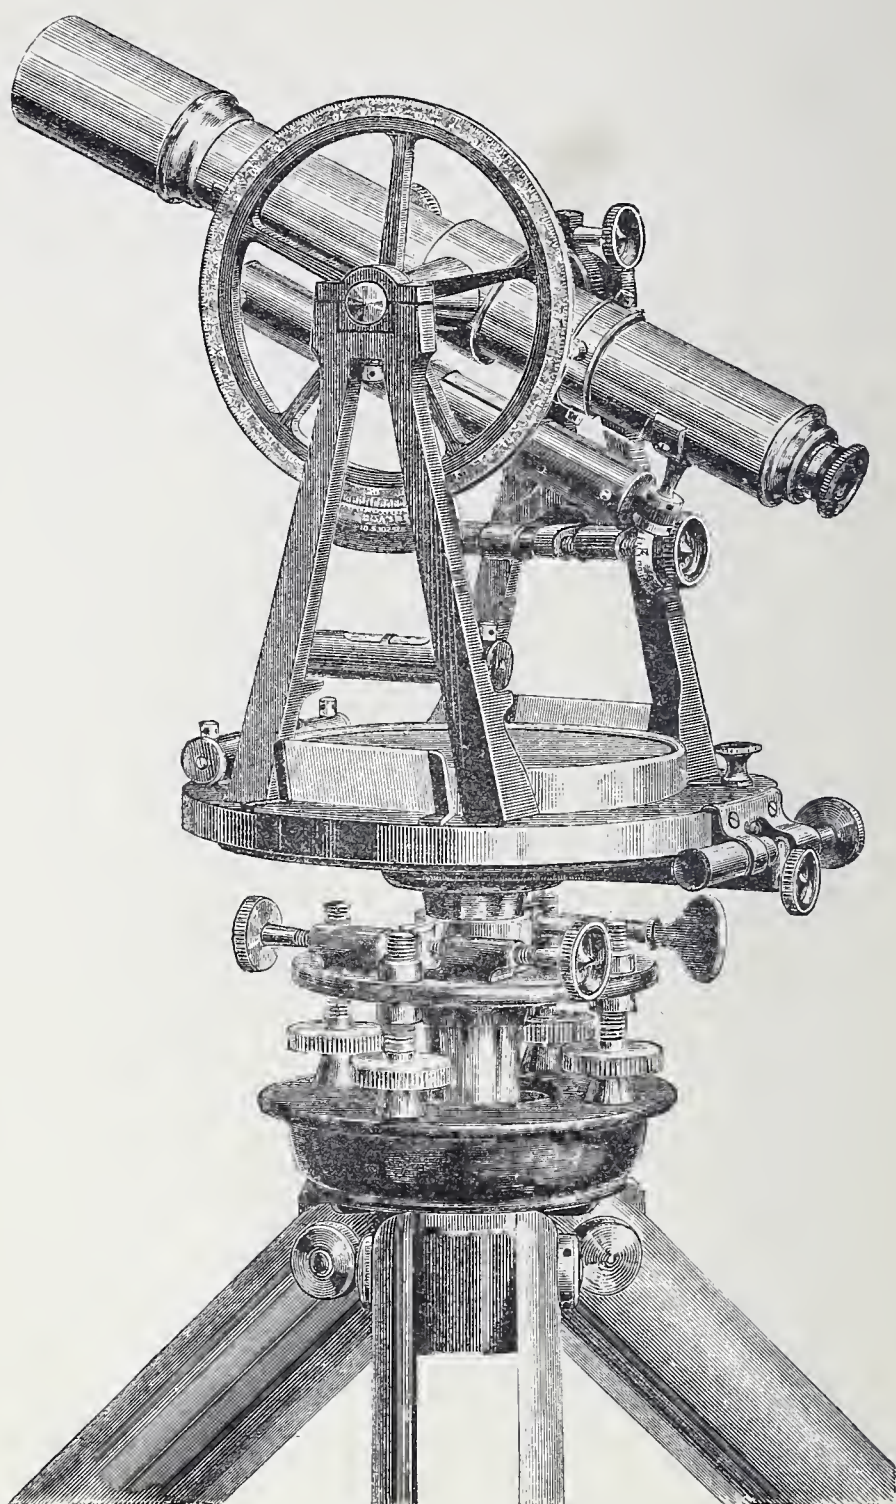

To find the POLAR STAR and determine the ELONGATION.

MERIDIAN SECTION OF CELESTIAL SPHERE.

SOLAR TRANSIT.

ENGINEERS' AND SURVEYORS' TRANSIT,
With Gradienter Screw Attachment.

point, reading the vertical arc, turning the horizontal limb half way around, and the telescope over to get another reading on the star, when the difference of the two readings will be the *double* zenith distance, and *half* of this subtracted from 90° will be the required altitude. The less the time intervening between these two pointings, the more accurate the result will be.

Application.

Having given the latitude, thus determined, and the corresponding azimuth from the table, to make the observations, the surveyor should provide himself with a good transit with a vertical arc, (see Plate I,) a bull's-eye or hand lantern, plumb bob, stakes, etc. Set up over a stake, level, clamp the "A" vernier of the horizontal plate at zero, point to Polaris and watch its motion with reference to the vertical wire. To illumine the wires, the lantern must be so held by an assistant as to throw a ray obliquely into the telescope, yet not so much light as to obscure the star. A little practice will give the proper angle.

If the observation is on the western elongation, the star should appear to move to the left while coming down the wire. Follow it to the west, keeping the vertical wire on it until it ceases to move in that direction, then clamp the lower clamp, turn off the azimuth angle so as to bring the object or north end of the telescope to the right or east, and set a stake by lantern, or else take a reading to any distant visible object and complete the work subsequently by day.

DAY METHOD BY THE SOLAR TRANSIT.

Where it is important to locate meridian lines frequently, as on Government surveys of public lands, a method of finding the meridian must be used which can be more generally applied. That in general use is based upon the position of the sun at any time of day when it is visible, and was introduced by William A. Burt, in 1836. He placed what is called a solar attachment on the ordinary surveyor's compass, which invention has served as a guide to many modifications and improvements. The *principles*, however, of its application remain unchanged and may be found fully described in the manual entitled "*Burt's Solar Compass*."

By the aid of Plate II, we hope, however, to make these principles sufficiently clear to the reader to enable him to set the various arcs, after determining their proper values, and to use the solar as at present constructed in any of its varied forms. We have selected that manufactured by W. & L. E. Gurley, of Troy, New York, as best illustrating the principles. In the cut, however, the declination arc is swung out of the particular declination circle represented, but this fact need lead to no confusion. Otherwise, the instrument stands in the meridian with the zero point north; the hour circle parallel to the earth's equator; the axis of the declination circle parallel to the earth's axis; the horizon parallel to the earth's horizon; in short, it represents the globe in miniature and by turning the hour circle

to the local time the sun will be found in the plane of the declination arc, and when this is set to the sun's declination, his image will be seen on the screen when the instrument is in the meridian.

Definitions.

A few definitions again become necessary to form an intelligent conception of the subject:

The *hour angle* is only another name for the longitude. It is generally reckoned from Greenwich, mean noon.

Mean time is the time as given by a watch running uniformly. It differs from the apparent solar time, which is variable during the year, by an amount known as the *equation of time*, and which has been computed and tabulated. See appended table.

The *declination* of the sun or any celestial object is its distance north or south of the equator measured on the arc of the meridian passing through it. The complement of the declination is the *polar distance*.

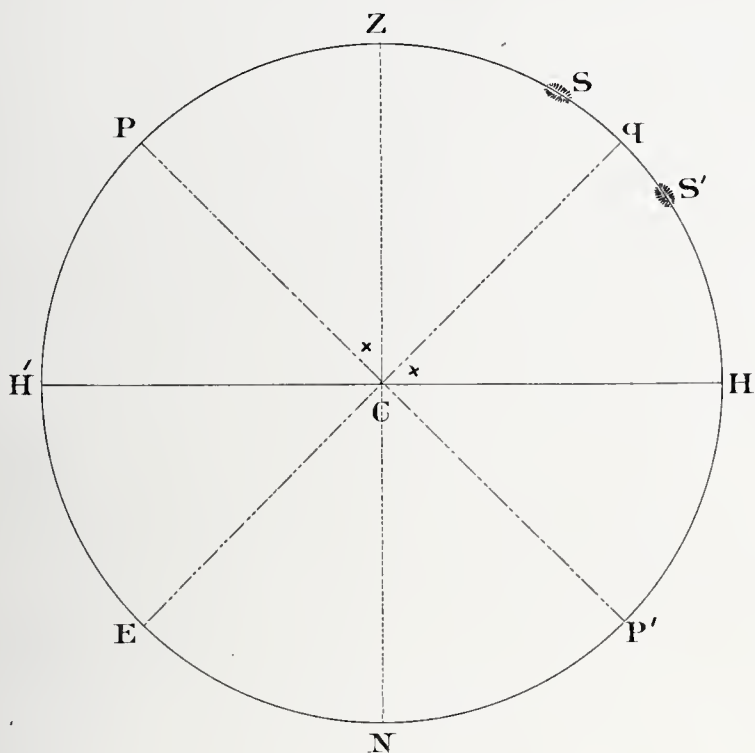

From this it appears that it is the same as the term latitude when applied to points on the earth, but for the sake of clearness this distinction is made. The coördinates of a point on the earth are, therefore, its *latitude* and *longitude*, and those of a heavenly body are its *declination* and *hour angle* or *right ascension*. (In this latter case the arc is measured from the first point of Aries instead of from any standard meridian.)

Principles.

To use the solar, the coördinates of the observer and of the sun must be known, and just here arises the old difficulty of finding the longitude or local time without first having the meridian. This may be done by solving the spherical triangle formed by the sun, S, the pole, P, and the zenith, Z, in which there are given the three sides, PZ, which is the co-latitude (determined as already described;) ZS, the co-altitude of the sun found by observation; and PS, the co-declination, taken from the nautical almanac; required, ZPS, the hour angle.

A simple method is that by equal altitudes, which is as follows: Set the instrument upon some bright circumpolar star at any altitude, clamp and read both horizontal and vertical arcs, then, without disturbing the vertical arc, move the instrument in azimuth (horizontally) until the star has come back to the horizontal wire on the opposite side of the meridian. Bisect it again with the vertical wire, and read the horizontal limb. The difference of the horizontal readings will give the total angle, the middle point of which will be the meridian. Or it may be found by the observations on the elongation of Polaris, as already described. Having the meridian, take the local time of the sun's passage, and the difference between that and mean noon at Greenwich will give the hour angle required. Differences of local time are best determined by telegraph.

Having now the latitude and longitude of the observer, and the hour

MERIDIAN SECTION OF CELESTIAL SPHERE.

HS = Altitude..... qS = Declination.

$Hq = ZP$ = co-lat. or polar distance of Z .

HS , the altitude, is therefore equal to Hq (co-latitude) + qS (the declination).

Z is the zenith of the place of observation.

Should S be at S' the altitude would then be $HS' = Hq$ the co-latitude, — qS' , the declination.

angle of the sun, it remains only to find the corrected declination for the time and place of observation.

Since the declination is affected by the refraction due to altitude, this latter quantity must also be determined and applied.

The *meridian altitude* of a celestial body is its distance from the horizon measured on a vertical circle, and is, therefore, equal to the polar distance or co-latitude of the place of observation plus or minus the declination, according as they have the same or different names.

Having, then, the co-latitude of the place, the required altitude is found by adding or subtracting the apparent declination as given in the almanac. The refraction corresponding to this altitude is taken from the table of refractions already given, either directly or by interpolation, and applied to the apparent declination + when the latitude and declination are both on same side of equator, — when on opposite sides. From this corrected declination subtract the hourly change as given in almanac, when it is decreasing or add it when increasing, and the resulting table will give the values at which the declination are must be set.

To illustrate these principles more fully, let us compute the declination table for Harrisburg for March 1, 1881. The latitude is $40^{\circ} 15'$, and longitude $76^{\circ} 12'$ —or 5 hours and 5 minutes west of Greenwich—hence it is 6h. 55m., A. M., at H. when it is noon at G. The apparent declination of the sun at this date and time is —South, $7^{\circ} 24' 41''$
And the co-latitude of Harrisburg is North, $49^{\circ} 45' 00''$

The meridian altitude is then the difference, $42^{\circ} 20' 19''$

The refraction corresponding to this altitude is $0^{\circ} 01' 04''$, which is negative as the latitude and declination are on opposite side of the equator.

The corrected declination will therefore be $7^{\circ} 24' 41''$
— $01' 04''$

From which the hourly change ($57''$) as given in the table $7^{\circ} 23' 37''$
for that date must be deducted since the declination is decreasing, and we have for the declination at Harrisburg, at — $57''$
7h. 55m., A. M., $7^{\circ} 22' 40''$

At 8h. 55m., A. M., it would be $57''$ less or $7^{\circ} 21' 43''$, and so on for any subsequent hour of the day.

Applications.

We now have the latitude $40^{\circ} 15'$, the declination corrected $7^{\circ} 23\frac{1}{2}'$ at 6.55, A. M., and the hour angle 6.55, A. M., local time, to set the instrument. Clamp the horizontal plates at zero, turn the entire instrument to point approximately north. Lay off the latitude on the vertical circle by raising the eye end, thus bringing the telescope parallel to the plane of the equator. Set the declination arc at $7^{\circ} 23\frac{1}{2}'$ south, turn it about its polar axis to the local time, say 7, A. M., and then revolve the entire transit about its

vertical axis until the image of the sun passing through the small lens attached to the plane of the declination arc falls between the ruled lines on the screen, and the instrument will be in the meridian.

Having thus obtained a true meridian by any of these methods, it may readily be extended by the ordinary method of back-sights.

To Determine the Variation

Set up the instrument at any point of the meridian, and take the magnetic bearing of this line. If it read *N. 5° E.* the variation is *west 5°*, and the reverse, since the magnetic pole is to the *west* of the true meridian.

Various other applications may be made of the solar for the practical determination of other elements, as time, latitude, &c., knowing the meridian. To find the mean solar time, the observed or apparent time of the sun's meridian transit must be corrected by the equation of time, as given in the subjoined table :

Approximate Equation of Time.

DATE.	MINUTES.	DATE.	MINUTES.	DATE.	MINUTES.	DATE.	MINUTES.
Jan. 1	4	April 1	4	Aug. 9	5	Oct. 27	16
3	5	4	3	15	4	Nov. 15	15

22	7	11	5	10	13	28	2
25	6	28	6	14	14	30	3
28	5			19	15		

The time of the passage of the sun's center over the meridian is best found by taking the mean of the times of first and last contact of the sun's limb with the vertical wire.

APPENDIX.

BOARD OF PROPERTY.

A Board of Property, consisting of the Attorney General, Secretary of the Commonwealth, and Secretary of Internal Affairs, is authorized by law. Their powers are to "hear and determine in all cases of controversy on caveats, in all matters of difficulty or irregularity, touching escheats, warrants on escheats, warrants to agree, rights of preëmption, promises, imperfect titles, or otherwise, which heretofore have, or hereafter may arise, in transacting the business of the said Land Office."

The present Board consists of:

LEWIS C. CASSIDY, *Attorney General*,

WILLIAM S. STENGER, *Secretary of the Commonwealth*,

J. SIMPSON AFRICA, *Secretary of Internal Affairs*.

Clerk of the Board, J. W. GREENLAND.

Stated meetings of the Board will be held on the Wednesday following the third Tuesday of each alternate month of the year 1884, to wit: January 16, March 19, May 21, July 16, September 17, and November 19. All communications for the consideration of the Board should be addressed to the Secretary of Internal Affairs.

No particular form of caveat is required, but the application, survey, or other office right against which it is entered, together with the reasons for filing the same, should be distinctly stated. After the caveat has been entered, if not more than two years have elapsed before proceeding thereon, either party may apply for a citation, to bring the matter in controversy before the Board, and, after citation issues, must give the opposing party thirty days' notice of the time fixed for hearing the case; and either desiring to take depositions to be read in evidence must give the other at least ten days' notice of the time and place, and before whom they are to be taken.

All other matters, within the powers of the Board to hear and determine, should be brought before it by petition.

WARRANTS AND SURVEYS.

A warrant or order of survey authorizes only the survey of vacant lands, for they alone belong to the Commonwealth to grant. But whether the lands applied for are vacant or not, the land officers do not undertake to

examine, and in most instances do not possess the means of ascertaining. Of this the applicant must judge for himself. If he knows them to be appropriated by prior right, it is against conscience to take out a warrant for them, or to have them surveyed as vacant. But he may assert the invalidity of a former grant, and insist on a survey. In that case, the deputy surveyor ought, if it be known to him, to note it in his books and return of survey.

RETURNS OF SURVEYS.—Having finished the survey and plotted it, the surveyor ought to return it to the office of the Secretary of Internal Affairs. This is an important part of his duty. Many regulations and laws have, from time to time, required it, and from its omission frequent disputes have occurred. The deputy surveyor, however, is not obliged to return the survey, until his fees and expenses are paid; and if the failure to return is occasioned by the neglect or refusal of the party to defray them, any loss thereby sustained is imputable to him, and not to the officer. The regulations of the proprietaries and the acts of Assembly, concur in directing the return to be made on paying for the survey. * * * If the party pays, or tenders the fees, it is the duty of the surveyor to return the survey in a convenient time, and the neglect or fraud of the surveyor will not affect his rights. But it lies on the party to show that the want of the return was not occasioned by any default or neglect of his own; and, if there is nothing to show that the surveying fees were paid, the inference is that they were not paid. The deputy, being a sworn officer, is, *prima facie*, presumed to have done his duty.

PATENTS.

The patent is a deed from the Commonwealth, under its great seal, conveying to the grantee all its right in the land, describing it by metes and bounds, and passes, as respects the Commonwealth, the complete legal title, all the preparatory measures of warrant, application, survey, and acceptance being merged in the patent. As to third persons, it is *prima facie* evidence, that all the previous requisites had been complied with. Before it issues, the purchase money due, [and the patent fee,] must always be paid; and the land is thenceforth discharged from the lien which till then existed. Generally, the grantee is concluded by the lines and boundaries described in the patent, though perhaps in a special case there might be an exception.

Third persons claiming by warrant, application, settlement, or otherwise, may show that the patent was wrongfully issued to the patentee; or rather that he is trustee for him who has the right; the material consideration being, not who has the patent, but to whom it ought to have been granted. For the land officers, in issuing the patent, act merely in a ministerial capacity, and cannot change the rules of law or rights of parties. And even though he who has the patent sell to a *bona fide* purchaser without notice, the vendee is in no better situation. His claim under the patent may be contested by one having a better right by settlement, warrant, or

location. These titles are not equities within the ordinary rule of being unavailing against a purchaser of the legal title. A patent founded on a fraudulent survey, or obtained by misrepresentation and deceit, is void against third persons affected by it.

The patent, however, has always been received in evidence in the first instance, to show that the legal title was out of the Commonwealth. The question whether it is good is a subsequent one.—*Sergeant's Land Laws*, p. 155.

The following regulations, relative to issuing patents, are published for the information and guidance of owners of unpatented lands :

1. The patent must issue to the actual owner of the land, or party holding title under the warrantee, or to the executors, trustees, or heirs and legal representatives of the person in whom title was vested at death, or to the guardians of minor children of the deceased.

2. Warrantees, who remain the owners of the land warranted and surveyed to them, can obtain patents in their own names, (if no caveat remains undetermined,) without furnishing any brief or statement of title, upon payment of back purchase money, interest, and fees.

3. Executors, trustees, and guardians, representing the warrantee, or his heirs, who apply for patents, should produce evidence of their appointment as such.

4. When the land has passed out of the ownership of the original warrantee, or party who took out the office right, the applicant for patent will be required to furnish evidence of ownership.

5. The present owner of a part of a tract of land surveyed in pursuance of any given warrant, desiring to have a patent in his own name, can obtain it by having the county surveyor make return of survey of such part. In making the survey, the county surveyor must, besides giving the courses and distances, and quantity of acres, in the particular part, indicate the residue of the original tract by dotted lines. The applicant will only be required to pay his proportion of the whole amount due on the tract, with fees. Evidence of ownership to accompany application.

6. When an unpatented original tract has been sold and sub-divided, the several present owners may unite in an application for patent and statement of title, and, upon payment of amount due, with patent and other fees, a patent will issue to them, the said applicants, their heirs and assigns, according to their respective rights and interests, without setting forth the particular interest of each.

7. In cases where it is difficult to submit the evidence of title required by this Department, in order to obtain a patent, any one or more of the owners of an unpatented tract can, through this Department, discharge the lien against said tract by the payment of the purchase money, interest, and fees, shown to be due by the land lien docket, and the interest since accrued, and a pat-

ent can at any time afterward be issued to those entitled to it, upon proof of ownership.

8. The accounts in the lien dockets are calculated to June 1, 1868. If to the amount due, as shown in its proper column, there be added the interest accruing from June 1, 1868, to the date of forwarding the docket to the prothonotary, at the rate given in the column of rate per cent. of interest, and on this sum, interest be calculated at the rate of six per cent. from the time of forwarding the docket until the date of the application for patent, it will give the amount required to procure a patent. (See 2d sec. of the act of the 20th of May, 1864, printed on a subsequent page.) But interest is not charged on patent or other fees. (See act of the 5th of May, 1871.)

A statement of the amount due on any particular tract or tracts, or any other information in relation thereto, will be promptly furnished, on application to this Department.

Persons sending money to the Department of Internal Affairs, for payment of arrears on unpatented lands and for records, &c., should send by registered letter, postal order, or express. Drafts, checks, or post-office money orders must be made payable to the order of the Secretary of Internal Affairs.

MISCELLANEOUS.

An indorsement, say for example, "Returned, &c., February 22, 1815," which is frequently found on copies of warrants and surveys, does not mean the date at which the return or survey was received at this office, but the date at which the Surveyor General made a return of the tract to the Secretary of the Land Office for patenting. And when such indorsement is found on the back of a copy of a warrant or survey, even after the date at which the office of the Secretary of the Land Office was discontinued, it is an evidence, in perhaps more than ninety-nine cases out of one hundred, that the tract is patented. Some exceptions have been found. Why the custom of marking the warrants and surveys thus, when a tract was patented, after the office of the Secretary of the Land Office was abolished on the 10th of May, 1844, is not apparent. This custom was discontinued on the 1st of January, 1868, and the indorsement, "Patented to _____, 18—," was substituted.

A mistaken idea, prevalent with many people not familiar with the Land Office, is, that the Department has connected drafts, showing the location of every tract of land surveyed in the several counties, and that, therefore, whatever of vacant land there may be in the State, can be readily found out at this office, and that information can, without difficulty, be given as to the adjoining surveys of any named tract, without advising the Department of the names and dates of the warrants upon which such surveys were made. Had the lands of the Commonwealth been first surveyed, and afterwards sold, this idea would have been correct, but the very reverse

was the fact, for the lands were sold, and warrants for subsequent surveys issued. And, because of this policy, the Department has only single and unconnected copies of the surveys. Unless a given survey calls for warrantee adjoiners, it would be a work altogether out of proportion to the fees allowed, to undertake to search out all the warrants and surveys, perhaps for a whole county, in order to find the adjoining tracts, or search for a supposed vacant piece of land; but the task is comparatively easy, when the party seeking the information, learns, as he can more readily do from the county surveyor, or persons in the neighborhood, the names of all the surrounding warrantees, and dates of warrants, and communicates that data to this Department.

It will be observed, from the foregoing, that in communication with the Department, it is of the first importance to give the name of the warrantee and date of warrant of the survey or patent about which inquiry is made; but when the date of warrant cannot be given, the party asking for official copies or information, should give quantity of acres, location, and any other data in his possession, that will aid in searching for the tract.

Frequently applications for warrants for land, made out in due form, are sent to the Department, unaccompanied by the purchase money and warrant fee. Of course the warrants cannot issue until the proper amount of money is paid into the State Treasury, and the applications thus made, gain no priority over others, that might be made for the same lands, until all the requirements of law are complied with.

The law does not contemplate that credit should be given on account of fees for searches and official copies, and, therefore, to save correspondence, and insure more speedy attention, the proper amount of fees should be sent with each order. If too much is forwarded, the surplus will be promptly returned, with the official papers asked for.

DATES

At which the county land lien dockets, prepared under the act of the 20th of May, 1864, and the supplement of the 4th of April, 1868, were forwarded to the prothonotaries of the several counties.

INSTRUCTIONS TO COUNTY SURVEYORS.

I. Execution of Warrants.

1. You shall faithfully execute every warrant that shall be directed to you from this Department, to the best of your skill, knowledge, and understanding, *according to the express words* and order of such warrants, and not otherwise.*

2. You shall not make use of any chain-carriers but such as are of good character, who shall take a solemn oath, (which you are authorized by law to administer,) justly and exactly to execute their trust, without favor, partiality, or affection.†

3. You will, on no pretense, execute new warrants upon lands heretofore surveyed on old warrants or orders, but report, as nearly as may be, the circumstances relating to the same. And before you make return of any lands by you surveyed on new warrants, endeavor to be satisfied that no warrant of an earlier date has been issued for the same land; and on your return, certify whether the lands have been improved, and for how many years.‡

4. You must, by no means, execute warrants on any other land than that which they particularly describe; and in order that your returns of survey may appear to be so executed, it will be necessary for you to be particularly attentive to the *adjoiners mentioned in the warrant*; and where there has been any change in them between the issuing and executing of the warrant, it must be noted in your return of survey.§

5. You will be particularly careful in executing warrants granted after the 1st day of June, 1814, and not founded on actual settlement, not to interfere with the rights of settlers, and in all cases where an actual resident settlement is included, note on your return whether it was commenced prior or subsequent to the 28th day of March, 1814.||

6. You shall not make return of any survey but such as has actually been made on the ground; and you shall take care that all outlines and boundaries shall be fairly and visibly marked before you quit the field.**

II. Returns of Surveys.

7. You are to make a separate return of survey on each warrant or order issued from this Department within six months after the receipt thereof.††

8. Each return of survey shall conform with the following requirements, to wit:

* ¶ 1 of instructions of the Commissioners of Property to Isaac Taylor, Proprietary's surveyor for the county of Chester, signed by said Taylor, on the 28th of eleventh month, 1701.

† ¶ 6 of same.

‡ Adopted, February, 1796.

§ Adopted in 1813.

|| Adopted in June, 1814.

** ¶ 7 of the instructions issued in 1701.

†† ¶ IV of instructions issued in 1765.

I. The paper or parchment used to be of the dimensions of at least eight by twelve inches.

II. It must contain a protracted figure of the land, exactly performed, with the field works annexed.*

III. All streams of water, roads, railroads, canals, township, or county lines, intersecting or crossing the lines of the survey, must be distinctly and visibly marked on the draft at the very place of intersection or crossing, and the distance from the corners expressed in figures on the lines crossed.†

IV. The lines of so much of the adjacent surveys as may serve to show their connection with the survey returned, to be represented on the draft by dotted lines.‡

V. When a survey is bounded by a creek or river, the bearings and distances of the several meanderings must be given.§

VI. Note, whenever they can be obtained, the *warrantee* names of adjoining tracts, as well as the names of the present owners thereof.

VII. The certificate on each return of survey to be made in accordance with the proper form, as printed in the annual reports of the Department.

9. When you return a survey of a part of a tract of land for patenting, you must specify the name of the warrantee, the date of the warrant, and the number of acres contained in the whole tract, and on the draft represent the residue of the tract by dotted lines.¶ But you are, in no event, to make and return to this Department a "re-survey" of a tract, either to include more land or to exclude any part, or in any wise alter the original boundary lines thereof, *unless authorized to do so by an order of the Board of Property*. When an order of re-survey has been issued, and sent to you for execution, you are strictly to follow the directions therein contained.

10. You may make official returns of surveys actually made by your predecessors, after having satisfied yourself of their correctness, and that they have been located according to the calls of the warrants.**

11. Surveys intended to be returned to this Department must be made or approved by you.

12. You may survey and return any surplus not exceeding one hundred acres above the quantity mentioned in the warrant, location, or order of survey. The purchase money for all the surplus land surveyed on warrants, must be first paid into the State Treasury, before the return of survey can be accepted in this Department, of which you will give notice to the owner

* ¶ IV of instructions issued in 1765.

† Adopted 1813.

‡ From ¶ 6 of instructions issued in 1796.

§ From ¶ 3 of instructions issued in 1796.

¶ ¶ 6 of instructions issued in 1813.

** ¶ 9 of instructions issued in 1833.

or owners of such warrant, and always send the money to pay the excess, with the return of survey.*

13. All returns of survey, in order to conform with the files of the Department, should be folded as follows: Double the sheet by bringing the upper and lower edges of the sheet evenly together, then fold in each side so as to make a form about two and seven eighths inches wide and in length from six to seven inches, according to the size of the sheet. The back of the return should be left blank.

14. With each return of survey send a copy of the tabling and calculation thereof on a separate piece of paper.†

15. All returns to this Department must be under cover, directed to the Secretary of Internal Affairs, with your name subscribed on the back of the paper or envelope inclosing the same.‡

III. Office Duties.

16. You are to keep your office open for the reception of all warrants directed to you, which shall be entered in a book, kept for that purpose, distinguishing therein the name of the warrantee, quantity of land granted, date of warrant, and the day when you received it. Also, in another book, you shall keep fair and regular entries, in order of time, of all surveys and re-surveys by you made, in pursuance of any warrant or order of survey which you shall receive, with a draft or plot thereof, and field works annexed. And the Secretary of Internal Affairs shall, from time to time, have free access to said books of entries and to all other papers relating to your office.§

17. Under the provisions of the Constitution of 1873, you are required to keep your office at the county town, but if you desire letters sent to any other address advise this Department.

18. Before you can enter upon the duties of your office, you must comply with the seventh section of the act of Assembly, passed the 9th day of April, 1850, which requires you to take an oath or affirmation, which must be administered in the open court of quarter sessions,|| and send a copy of said oath, duly certified, to this Department; and have your bond approved by the court, recorded in the office for recording deeds in the proper county, and forward the same to the *Secretary of Commonwealth*, with one dollar, the fee for filing in his office.

* Act of 13th March, 1817; repealed by act of 6th of April, 1830; restored by act of 21st April, 1869.

† Adopted 1853. See forms.

‡ Adopted June 7, 1824.

§ ¶ VIII of the instructions of 1795.

|| Constitution, Art. VII, Sec. 1, requires oath of all county officers to be filed in the office of the prothonotary of the proper county.

RECENT LEGISLATION RELATING TO THE LAND OFFICE.

COUNTY SURVEYORS.

Their Duties.

Under the Proprietary government, deputy surveyors were appointed by the Proprietary, the Commissioners of Property, or the Surveyor General, for certain districts, and given authority to execute warrants or orders, by making surveys and returns thereof to the Land Office. The duties of these deputies were defined by letters of instructions, issued from time to time. Those dated the 28th of eleventh month, 1701, revised and enlarged in 1765, contain such directions as were then deemed necessary for the information and guidance of the deputies, and formed the basis of those now in force. The act of Assembly of the 9th April, 1781, establishing the Land Office under the Commonwealth, authorized the Surveyor General to appoint a deputy or deputies in any county of the State, who should have power to make and return into the Land Office surveys of land only in the county for which such deputy or deputies shall be appointed; and the act of 1st April, 1784, by virtue of which the Land Office was opened on the 1st day of July following, for the sale of the vacant lands of the Commonwealth, directed that its several officers should transact the business of the Land Office, agreeably to the former customs and usages thereof. By subsequent legislation, the duties of the deputies were more clearly defined. The act of the 9th April, 1850, [P. L. 434,] authorized the voters of each county, at the following general election, and every third year thereafter, to elect one competent person, being a practical surveyor, to act as county surveyor for the proper county for the term of three years, who is required to do and perform all the duties which then pertained to the respective deputies of the Surveyor General.

Term of Office.

[*Constitution, Art. XIV.*]

SECTION 1. County officers shall consist of sheriffs, coroners, prothonotaries, registers of wills, recorders of deeds, commissioners, treasurers, surveyors, auditors or controllers, clerks of the courts, district attorneys and such others as may, from time to time, be established by law. * * * *

SECTION 2. County officers shall be elected at the general elections and shall hold their offices for the term of three years, beginning on the first Monday of January next after their election, and until their successors shall be duly qualified; all vacancies not otherwise provided for shall be filled in such manner as may be provided by law.

To Keep Office in the County Town.

SECTION 4. Prothonotaries, clerks of the courts, recorders of deeds, registers of wills, county surveyors, and sheriffs, shall keep their offices in the county town of the county in which they respectively shall be officers.

To Hold Office Until Successor is Qualified.

[Act of 17th April, 1869. P. L., 67.]

A supplement to an act, entitled "An act relative to the election of Auditor General, Surveyor General, and county surveyors by the people," approved April ninth, one thousand eight hundred and fifty.

SECTION 1. That the persons now or hereafter holding the office of county surveyor shall continue to hold and exercise all the duties appertaining to said office, until their successors are duly qualified according to the provisions of the act to which this is a supplement

Fees.

[Act of 13th of April, 1859. P. L., 606.]

An act relating to the fees of county surveyors.

SECTION 1. That the several county surveyors of this Commonwealth shall be and are hereby authorized to charge and receive for the services hereinafter mentioned, the following fees, and no more, to wit:

For receiving warrant and giving receipt for the same, if required, . . .	\$1 25
For executing warrants, not exceeding one hundred acres,	4 50
For each additional one hundred acres on same warrant,	75
For return of surveyor to Surveyor General's office, [Department of Internal Affairs,]	1 00
For draft thereof to the warrantee,	25
For executing order of re-survey and making return thereof, same fees as for like service on original survey.	
For certifying survey made by deputy,	50
For each mile necessarily traveled in going to and returning from land,	10

EXCESS.

[Act of 21st April, 1869. P. L., 87.]

An act relative to returns of surveys to the office of the Surveyor General.

SECTION 1. That so much of the second section of the act approved the sixth day of April, Anno Domini one thousand eight hundred and thirty, as restricts returns of surveys on warrants thereafter to be issued to an amount not greater than ten per centum beyond the number of acres for which the warrant issued, be and the same is hereby repealed: *Provided*, That any excess which may be returned under the provisions of prior laws shall be paid at the time of making such return of survey to the Surveyor General, otherwise the same shall not be accepted.

[Any surplus not exceeding one hundred acres, may now be returned on any warrant or order of survey, provided that the money for such surplus accompanies the return. See paragraph 12 of "Instructions to County Surveyors."]

FEES.

[Act of 15th April, 1873. P. L., 75.]

An act relating to the fees of the Surveyor General.

SECTION 1. That from and after the passage of this act the fees to be collected by the Surveyor General, for the use of the Commonwealth, shall be as follows, namely:

For warrant, including return thereof,	\$5 00
Patent for five acres or less,	5 00
Patent for more than five acres,	10 00
Copy of patent,	1 00
Certificate with seal of office on patent, when mortgage is discharged,	50
Every search,	25
Calculation of money due on land, including search,	50
Caveat,	1 00
Issuing citation,	1 00
Recording application for and making order of re-survey,	1 00
Order of the Board of Property, directed by the Surveyor General to the county surveyor to be executed,	1 00
Copy of action or determination of Board of Property, with seal,	1 00
Order for valuing islands,	2 00
Entering application on petition to the Board of Property, together with the minutes thereon, for any other purpose than a re-survey,	1 00
Certified copy of a draft of a single tract, with certificate and seal,	1 00
Connecting separate drafts into one general draft, with certificates for each separate draft therein,	75
Copy of general draft of town or out-lots, for each tract of land therein described,	25
Extract from a general draft, for each tract of land therein described,	25
Copy of draft of lots or tracts of land annexed to certificate of Connecticut claimants or others, for each tract,	75
Copy of warrant, application or any other office right, relating to but one tract of land not hereinbefore enumerated,	50
Copy of extract from the deputy surveyor's list of returns, and all other extracts not hereinbefore recited, for each tract,	25
Copy of any record or paper or any part thereof, not included in the foregoing, for two hundred words or less,	50
And for every ten words additional,	1
Certifying and affixing seal of office to any copy, connected draft, extract, certificate, or minute,	25

SECTION 2. All laws and parts of laws inconsistent herewith are hereby repealed, so far as they relate to the fees of the Surveyor General.

Entering lien, under act of 20th May, 1864, for each tract, . . . \$5 00

LIENS FOR UNPAID PURCHASE MONEY.

1. Lists of unpatented lands to be forwarded to prothonotaries.
2. Unpaid purchase money, &c , to be entered on lien docket. Interest.
3. Prothonotaries to docket descriptive lists of unpatented lands. Courts, on hearing, may strike off such entry.
4. Supplied by paragraph 10.
5. Repealed by act of April 4, 1868.
6. Graduation act of 1835, continued until November 1, 1874.
7. Attorney General to proceed on liens.
8. Time allowed to persons in the military or naval service.
9. Changed by act of April 15, 1873. [See note.]
10. Land lien dockets. Entries thereon. Fees.
11. Repeals sec. 5 of act of May 20, 1864.
12. Notice to be given when lien dockets have been forwarded to prothonotaries.
13. No suit to be entered for one year.
14. Release of liens on proof of payment.
15. Board of Property to regulate suits for unpaid purchase money. Interest not to be charged on fees.
16. Lists to be furnished to county surveyors.
17. County surveyors to give notice to owners or occupants.
18. County surveyors to make report to Surveyor General.
19. Surveys to be made of parts of original tract.
20. Suits to be by *scire facias*. Service.

[Act of 20th May, 1864. P. L. 914.]

An act directing the entry of liens for the principal and interest due the Commonwealth, for lands held by virtue of locations, or other office titles.

1. SECTION I. That it shall be the duty of the Surveyor General to make out a list of all lands held by location, or any other office right, issued from the Land Department of this Commonwealth, of every kind and description, upon which no patents have issued, designating the county in which such lands are situated, with such other descriptions of the same as the records of his office will enable him to give, including the names in which such locations or other office rights are entered, and surveys have been returned; and on the list being completed, or any part thereof, be transmitted to the prothonotary of the county in which such lands are situated.

2. SECTION II. That it shall be the duty of the Surveyor General to calculate the amount of purchase money, interest, and fees, due on each unpatented tract; and after the descriptions of said tracts have been transmitted to the prothonotaries of the respective counties, and entered, as hereinafter provided, the amounts so found to be due, together with five dollars for the labor and costs of making out and filing, shall form an aggregate sum which shall be entered in a lien docket to be provided and

kept for that purpose, and said sum shall bear interest at the rate of six per cent.

3. SECTION III. That it shall be the duty of the prothonotary of each county, upon receiving any descriptive list as aforesaid, to provide a suitable docket, with a proper index, for the purpose of recording all such descriptions of unpatented lands, and shall accurately record the same and index the name of the original warrantee or actual original settler, as the case may be, and each subsequent owner so far as ascertained, and preserve the same among the records of the county : *Provided*, That when any party in interest, by petition under oath or affirmation, setting out the facts in the case, as in affidavit of defense, shall represent to the president judge of the court of common pleas of the county, in which any tract or piece of land, against which the entry directed in the foregoing section has been made, or the principal part thereof, may lie, that said tract has been patented, either in the name against which the entry is made, or in any other name, the said judge shall, after such notice to the Surveyor General as he shall deem proper, proceed to hear the case of the petitioner ; and the said judge shall, thereupon, make such decree in the premises, either by directing the said entry to be struck from the record, or such other order as to said entry, and also as to costs, as may seem equitable.

4. SECTION IV. That it shall be the duty of the prothonotary of each county, upon receiving from the Surveyor General any such list or calculation of amounts due the Commonwealth for purchase money, interest, and fees, to provide a suitable docket with index, in the form of the lien dockets now in use in the several counties of this Commonwealth, to be styled "Lien Docket of Unpatented Lands," and enter therein the amount so found to be due, which sum shall remain a lien upon such tract or tracts, until paid ; and that a fee of fifty cents be paid to the prothonotary for each description so entered, and that he be allowed the same fees on the liens entered, as are now allowed on judgments entered by warrant of attorney in the court of common pleas.

5. SECTION V. That it shall be the duty of the prothonotary upon receiving any such descriptive list, to cause the same to be published in two newspapers in the county where such lands are located, for three successive weeks, for which publication he shall be authorized to pay fifty cents for each tract, and charge the same as costs on the lien docket, and retain his fees and costs out of any moneys, in his hands, due the Commonwealth.

6. SECTION VI. The amounts which may be due to the Commonwealth on the lands mentioned in the first section of this act, may be paid in accordance with the existing laws in relation to such lands, if the same be paid prior to the first day of November next : *Provided*, That any costs, which may have accrued in accordance with the provisions of this act, shall also be paid, and that the act to graduate lands on which money is due and unpaid to the Commonwealth of Pennsylvania, approved April tenth, Anno Domini one thousand eight hundred and thirty-five, be re-

vived and continued in force, until the said first day of November next; and any survey and appraisements, made since the first day of August last, shall have the same validity for the issuing of patents thereon, as if the last mentioned law had been still in full force.

7. SECTION VII. That all liens due the Commonwealth for unpatented lands, after the first day of November, Anno Domini one thousand eight hundred and sixty-four, may be proceeded upon by the Attorney General of the Commonwealth, in the manner directed to be pursued against defaulting public officers, by the act of April sixteenth, one thousand eight hundred and forty-five, and the supplement thereto.

8. SECTION VIII. All persons in the military and naval service of the United States, shall be allowed one year after the expiration of said service, for the taking out of any patent or patents under the provisions of this act.

9. SECTION IX.* That, hereafter, the patent fee, on town lots not exceeding one fourth of an acre, shall be one dollar, and on lots not exceeding two acres, five dollars.

[Act of 4th April, 1868. P. L., 60.]

A supplement to an act directing the entry of liens for the principal and interest due to the Commonwealth for lands held by virtue of location or other office titles, approved the twentieth day of May, Anno Domini eighteen hundred and sixty-four.

10. SECTION I. That in lieu of the descriptive lists provided for in said act, it shall be the duty of the Surveyor General to make out and forward to the prothonotaries of the several counties, lien doekets, to be styled "land lien doekets," containing lists of all unpatented and patented lands, situate in the counties respectively, upon which there is money due the Commonwealth, and in all cases where surveys have been returned, to enter therein the amount of purchase money, interest, and all fees due, and said aggregate shall remain a lien on such tract until paid or otherwise legally discharged: *Provided*, That the several prothonotaries shall be allowed to charge the fees now authorized by law when any information shall be desired from said records, and for entering any certificate under the seal of the Surveyor General, setting forth that any lien or part of lien against an unpatented tract has been paid, shall charge the party presenting such certificate a fee of twenty-five cents for entering and filing the same.

11. SECTION II. That the fifth section of the act to which this is a supplement, and so much of said act as is inconsistent herewith, be and the same is hereby repealed.

*Section nine changed by act of April 15, 1873.

[Act of 8th April, 1869. P. L., 21.]

An act directing public notice to be given when county land lien dockets are forwarded to the respective counties, and staying proceedings by the Attorney General for one year from the date of forwarding the same.

WHEREAS, The Surveyor General, at an early day, will be prepared to send out the county land lien dockets, containing accounts due the Commonwealth on account of lands, prepared under the act approved the twentieth day of May, Anno Domini one thousand eight hundred and sixty-four, and the supplement thereto, approved the fourth day of April, Anno Domini one thousand eight hundred and sixty-eight :

And whereaz, It is proper that the people owing the State, for or on account of lands, should have notice when the liens therefor are entered in the counties, and that a reasonable time should be given to enable them to liquidate their indebtedness and obtain patents for their lands, before suits shall be brought in such cases by the Attorney General ; therefore,

12. SECTION I. That when any county land lien docket, prepared under the forgoing acts, shall be forwarded to any county, the Surveyor General is hereby authorized and directed to cause a notice thereof to be given in one English newspaper, published at the county seat of such county, and also in one German newspaper, if there be one in said county, setting forth that the land lien docket for that county has been forwarded to the prothonotary thereof: *Provided*, That no greater sum than ten dollars shall be paid for such notice or advertisement for any one county ; and on evidence being submitted to the Auditor General that such advertisement has been authorized by the Surveyor General, and inserted at the usual rates of advertising, he shall draw his warrant on the treasury in favor of the editor or publisher inserting the same.

13. SECTION II. That no suit or suits shall be entered or instituted by the Attorney General, under the provisions of the seventh section of the act of the twentieth of May, Anno Domini one thousand eight hundred and sixty-four, until one year shall have elapsed from the date at which the Surveyor General shall have forwarded to each county, respectively, the land lien docket for the same.

[Act of 15th April, 1869. P. L. 31.]

A further supplement to an act directing the entry of liens for the principal and interest due to the Commonwealth for lands held by virtue of locations or other office titles, approved the twentieth day of May, Anno Domini one thousand eight hundred and sixty-four.

WHEREAS, An examination of warrants and returns of survey show in many cases interferences in said returns, and in many instances where patents have issued on some of said surveys, there are balances due upon other warrants covering the same land ; therefore,

14. SECTION I. That whenever satisfactory evidence shall be given to the Surveyor General that a lien or liens have been entered against lands for which the Commonwealth has been fully paid, both for land and patent

fees, he is hereby authorized, and it shall be his duty, to give to the party or parties applying for the same a release of said lien or liens, so far as said patented lands are concerned; which said release may be entered on the land lien docket, in accordance with the provisions of the supplement to the act of which this is a further supplement, approved the fourth day of April, Anno Domini one thousand eight hundred and sixty-eight.

[As many persons will apply for releases under the provisions of this law, it is deemed proper to state what will be regarded as satisfactory evidence by this Department. Applicants, in order to avail themselves of the act, should cause a plot or survey of the patented tracts, and the unpatented interfering tracts, (showing the manner in which, and to what extent they cover the same land,) to be made by the county surveyor, who will certify that he has made the same at the request of A, B, and C—the owners of the patented tracts, or parts of tracts, or their agents or attorney—giving names of warrantees and dates of warrants and patents, and names and dates of warrants of the unpatented lands, and that he believes the interference or interferences to be as delineated by him. On a paper appended to the above plot of surveys, the applicant or applicants, his or their agent or attorney, will be required to make an affidavit, that the interferences are believed to be as delineated by the county surveyor. A release will then be issued to the owner or owners of the patented tract or tracts, relieving them from any and all liability to pay the lien of the Commonwealth entered against such interfering unpatented tract or tracts. Section seven of the act approved the 20th day of May, 1864, invested the Attorney General with authority to proceed against the owners of unpatented lands, to enforce the payment of the arrears of purchase money, interest and fees due the Commonwealth on said lands. This power, by the following supplement, became vested in the Board of Property.]

[Act of 5th May, 1871. P. L., 261.]

A further supplement to an act directing the entry of liens for the principal and interest due the Commonwealth for lands held by virtue of location or other office titles, approved the twentieth day of May, Anno Domini one thousand eight hundred and sixty-four.

15. SECTION I. That the Board of Property shall have full and discretionary power as to the time of entering suits and the number thereof, to be brought for the collection of liens against unpatented lands; and the Attorney General shall proceed, under the seventh section of the said act, to which this is a further supplement, when authorized to do so by the said Board: *Provided*, That no interest shall be charged on patent or other fees.

[Act of 11th April, 1872. P. L., 51.]

A further supplement to an act directing the entry of liens for the principal and interest due the Commonwealth for lands held by virtue of location or other office title, approved the twentieth day of May, Anno Domini one thousand eight hundred and sixty-four.

16. SECTION I. That for carrying into full effect the provisions of the act to which this is supplementary, it shall be the duty of the Surveyor General to make out and forward to the several county surveyors, respectively, from time to time, as the Board of Property may determine, special lists of warrantee names of unpatented tracts, or remaining parts of unpatented tracts, of lands within the several counties, as the same may appear upon the land lien dockets, with such other data relating thereto as he may deem necessary.

17. SECTION II. That it shall be the duty of the county surveyor of each county, to whom the Surveyor General may send special lists of warrantee names of unpatented tracts or parts of tracts of land, and other data relating thereto, situate in the county for which such surveyor shall have been elected or appointed, to endeavor to ascertain the names and residences of the owners, agents, or occupiers, and location of said tracts or parts of tracts, or any of them, and to give personal notice in writing to said owners, agents, or occupiers, that said tracts or parts of tracts are unpatented, and that unless the arrearages shall have been paid within six months from the time of sending or serving said notice, the Board of Property may direct proceedings to be commenced by the Attorney General to enforce payment, under the provisions of the act to which this is a further supplement: *Provided*, That when unpatented lands as aforesaid are unoccupied, and the owners are non-residents of the county, and have no known agent or agents within the county, the said notice may be given by sending it by mail, addressed to the owners or agents, and directed to the post-office nearest their place of residence or usual place of business: *And provided further*, That when lands as aforesaid are unseated, and have been sold for taxes, and the time limited for their redemption has not expired, it shall be the duty of the county surveyor to give notice, in the manner hereinbefore provided, to the purchasers or their agents, and also to the parties, or their agents, who last paid taxes thereon previous to the sale.

18. SECTION III. That it shall be the duty of the county surveyor to whom such special list shall have been sent as aforesaid to make a written report in duplicate, within three months, to the Surveyor General, filing a copy of the same in the prothonotary's office of each county, setting forth the names of warrantees, dates of warrants, location of tracts, and the names and residence of the owners, agents, or occupiers of the unpatented tracts or parts of tracts, upon whom he has served the notices as aforesaid, together with the manner of service; and for serving such notices on all the owners, agents, or occupiers of an original unpatented tract, or remaining part of an original unpatented tract, he shall be entitled

to a fee of five dollars, to be paid out of the State Treasury, on warrants drawn by the Auditor General, upon the certificate of the Surveyor General.

19. SECTION IV. That it shall be the duty of the county surveyor, upon the reasonable request of any owner, or his agent, of part of an original tract which has not been patented, to make and return a return of survey of such part to the Surveyor General, and for which service his fees shall be the same as for executing a warrant of survey, as now provided by law for the same quantity of acres.

20. SECTION V. That when any suits shall be entered by the Attorney General, under the act to which this is a further supplement, it shall be by *scire facias sur liens*, which shall be directed for service to the sheriff of the county in which the land is situate; and if he finds it necessary to insure a service of said writ, he may call to his aid the county surveyor, who shall act as his deputy, for the purpose of serving such writ; and all such writs shall be made returnable to the court of common pleas of the county wherein such lands are situate, where all such suits shall be tried.

SECRETARY OF INTERNAL AFFAIRS.

[Constitution, Art. IV.]

[Section I names the Secretary of Internal Affairs as one of the Executive Department, and section 9 constitutes him a member of the Board of Pardons.]

SECTION XIX. [I.] The Secretary of Internal Affairs shall exercise all the powers and perform all the duties of the Surveyor General, subject to such changes as shall be made by law. His department shall embrace

[II.] A bureau of industrial statistics,

[III.] And he shall discharge such duties relating to corporations, to the charitable institutions, the agricultural, manufacturing, mining, mineral, timber, and other material or business interests of the State as may be prescribed by law.

[IV.] He shall annually, and at such other times as may be required by law, make report to the General Assembly.

SECTION XXI. The term of the Secretary of Internal Affairs shall be four years. * * * * * * *

[Art XVII.]

SECTION XI. The existing powers and duties of the Auditor General in regard to railroads, canals, and other transportation companies, except as to their accounts, are hereby transferred to the Secretary of Internal Affairs, who shall have a general supervision over them, subject to such regulations and alterations as shall be provided by law; and, in addition to the annual reports now required to be made, said Secretary may require

special reports at any time upon any subject relating to the business of said companies from any officer or officers thereof.

[These provisions of the Constitution are enforced by acts of Assembly, passed in pursuance thereof, approved respectively on the 11th day of May, 1874, P. L. 135; the 15th day of May, 1874, P. L. 172 and 193; and by the following:]

[*Act of 8th May, 1876. P. L., 113.*]

A further supplement to an act regulating the election of Secretary of Internal Affairs, defining his duties and fixing his salary, approved the eleventh day of May, Anno Domini one thousand eight hundred and seventy-four.

SECTION I. That the Secretary of Internal Affairs and his chief clerk, who shall hereafter be designated Deputy Secretary of Internal Affairs, shall have power and authority to administer oaths or affirmations in any or all matters pertaining to the business of his Department.

SECTION II. All maps, drafts, reports, and other papers relating to surveys of State or county lines, State or turnpike roads, railroads, canals, or other public improvements now remaining in the office of the Secretary of the Commonwealth, and not connected with the other records of his office, shall, as soon as practicable after the passage of this act, be transferred to the Secretary of Internal Affairs, who is hereby authorized and directed to receive and deposit the same in his Department; and all such maps, drafts, reports, and papers as are now by law required to be placed in the office of the Secretary of the Commonwealth, shall hereafter be deposited in the Department of Internal Affairs.

SECTION III. It shall be the duty of all commissions appointed to reestablish any of the boundary lines of this Commonwealth, to erect a new county, or to annex part of one county to another county, to transmit a copy of their report to the Secretary of Internal Affairs, to be by him deposited in his Department.

SECTION IV. It shall be the duty of all commissions appointed to re-survey, re-mark, alter, or change any county line, to deposit duplicate copies of their report in the office of the clerk of the court of quarter sessions of the proper county; and after the same has been confirmed by said court, the said clerk shall, upon one of the copies, certify such confirmation, and immediately transmit the same by mail to the Secretary of Internal Affairs to be by him deposited in his Department.

SECTION V. Copies of all records, documents, entries, and papers now in the Department of Internal Affairs, or that may be transferred thereto in pursuance of this act, or that may hereafter be deposited therein according to law, shall be made and certified at the request of any person applying for the same, on the payment of the same fees as was prescribed by the fee bill for similar services in the Surveyor General's office at the time the same was merged into said Department, which fees shall be accounted for and paid into the Treasury in the same manner as is now provided by law for other fees, to be collected by the said Secretary; and the said copies shall

be received in evidence in the several courts of this Commonwealth, in all cases where the original records, documents, entries, and papers would be admitted in evidence.

* * * * *

WARRANTS.

[*Act of 14th April, 1874. P. L., 58.*]

An act relative to the issuing of warrants to survey vacant lands.

SECTION I. That every applicant for a warrant to survey any of the vacant lands of this Commonwealth shall produce to the Surveyor General a particular description of the land applied for, with an affidavit of a disinterested witness, made before a justice of the peace of the township or borough in which the land applied for, or the greater portion of it, is situate, or if there be no justice of the peace in such township or borough, before a justice of an adjoining township or borough, specifying whether the said land be improved or not, and if improved, how long since the said improvement was made, that interest may be charged as now provided by law. The applicant for such warrant shall declare, upon oath or affirmation, before a justice of the peace of the township or borough in which the land or greater portion of the same is situate, or if there be no justice in such township or borough, before a justice of an adjoining township or borough, that he verily believes that no warrant or other office right has previously issued for such land, or if one has issued, after giving full particulars in relation thereto, shall depose that he verily believes it has been abandoned; and if at any time thereafter it shall appear that the person or persons deposing, as aforesaid, or any of them, shall knowingly have sworn falsely, such person or persons shall suffer all the pains and penalties of perjury.

SECTION II. No warrant shall issue for any tract or piece of land on which settlement is made, or which may be either in whole or in part cleared and fenced, or otherwise improved, used, or occupied and held by defined boundaries, unless to such person or persons, respectively, who have made the settlement, clearing, fencing, or improvement, their legal representatives or assigns, upon proof of ownership of such settlement or improvement right, and if any warrant shall issue otherwise than as aforesaid, it shall be void: *Provided*, That this section shall not apply to abandoned improvements.

SECTION III. Every applicant for a warrant to survey vacant land shall, after filing his or their application for such warrant, and depositing the amount of the purchase money and fee with the Surveyor General, give at least thirty days' notice of the filing of said application, with a full description of the land as set forth in the application, by publication once a week for three successive weeks, in one or more newspapers of the county in which the land is situate, and nearest its location, and shall furnish

proof that such notice has been given, before a warrant shall issue : *Provided*, That if any *caveat* or *caveats* shall have been entered against issuing such warrant, the same shall not issue until directed by the Board of Property ; and if the Board of Property, after a hearing upon a citation issued in pursuance of any *caveat*, shall decide against issuing the warrant, the purchase money shall be returned to the applicant.

SECTION IV. This act shall not apply to applications for warrants filed with the Surveyor General before its passage.

PRICES OF LAND IN PENNSYLVANIA AT VARIOUS PERIODS.

Prices under Penn and his Heirs.

Previous to the 27th of December, 1762, £15 10s. (\$41 33) per hundred acres, with the exception of a few warrants in the lower counties at £3 10s. (\$9 33) per hundred.

From the 27th of December, 1762, to the 5th of August, 1763, £9 (\$24) per hundred acres.

From the 5th of August, 1763, to the 6th of August, 1765, £15 10s.. (\$41 33.)

Locations and warrants from the 6th of July, 1765, to the 1st of July, 1784, £5 sterling (\$22 22.)

Prices under the Commonwealth.

From the 1st of July, 1784, to the 3d of April, 1792, £10 (\$26 66 $\frac{2}{3}$) per hundred acres.

New Purchase, 1784—From the 1st of May, 1785, to the 1st of March, 1789, £30, (\$80.)

From the 1st of March, 1789, to the 3d of April, 1792, £20 (\$53 33 $\frac{1}{3}$).

From the 3d of April, 1792, to the 1st of September, 1817, £5 (\$13 33 $\frac{1}{3}$) for land in the purchase of 1784, east of the Allegheny river and Conewango creek, unimproved.

Purchase of 1768 and the Previous Purchases.—From the 3d of April, 1792, to the 28th of March, 1814, at the rate of fifty shillings (\$6 66 $\frac{2}{3}$) per hundred acres.

Lands in the purchase of 1784, lying north and west of the rivers Ohio and Allegheny, and Conewango creek, £7 10s., (\$20.)

Undrawn donation lands, from the 1st of October, 1813, at the rate of \$1 50 per acre.

Donation lands reduced, from the 25th of February, 1819, to fifty cents per acre.

From the 21st of March, 1814, lands within the purchase of 1768, and the previous purchases, to be at the rate of £10 (\$26 66 $\frac{2}{3}$) per hundred acres.

From the 1st of September, 1817, lands within the purchase of 1784, east of the Allegheny river and Conewango creek, at the rate of £10, (\$26 66 $\frac{2}{3}$), except such as have been settled on, agreeably to the act of 3d of April, 1792, between said 3d of April and 1st of September, 1817.

Seventeen townships in Luzerne county—price fixed by the commissioners: First class, \$2 per acre; second class, \$1 20; third class, 50 cents; fourth class, 8 $\frac{1}{4}$ cents.

Present Price.

The price of all vacant and unimproved land is now at the rate of £10 (\$26 66 $\frac{2}{3}$) per hundred acres, except the following:

Lands lying north and west of the rivers Ohio and Allegheny, and Conewango creek, \$20 per hundred acres.

Reserve tracts near Erie, Waterford, &c., price fixed by commissioners.

Lands improved agreeably to the act of the 3d of April, 1792, fifty shillings, (\$6 66 $\frac{2}{3}$), and £5 (\$13 33 $\frac{1}{3}$) per hundred acres.

Lands held by Virginia warrants, in the south-west part of the State—the warrants show the terms. Lands were taken under Virginia warrants as low as ten shillings per hundred acres.

It is the practice in the Land Office to charge for the *excess* of land above *ten per cent.* on fifty shilling warrants, at the rate of £10 per hundred acres.

TABLES

Showing the price of from one acre to five hundred acres of Land at the various rates prescribed by the Proprietary and by the Commonwealth.

Warrants at £15 10s. per cent., two per cent. interest.

FORMS.

FORM No. 90.

Application for Unimproved Land.

. of the of
in the county of appl . . for
acres of land, situated in the township of and
county of , adjoining lands of
. on the east,
. on the south,
. on the west, and
. on the north.

To the Secretary of Internal Affairs of } [Applicant sign.]
the Commonwealth of Pennsylvania. }

. County, ss :
Before me, the subscriber, a justice of the peace, in and for the township
of , and county aforesaid, personally came
. a disinterested witness, who being duly sworn ac-
cording to law, did depose and say, that to his certain knowledge the land
described in the above application is unimproved.
Sworn and subscribed before me, this }
. day of 188 . } [Witness sign.]
. J. P. }

. County, ss :
Before me, the subscriber, a justice of the peace, in and for the township
of , and county aforesaid, personally came
. the above-named applicant , who being duly
sworn according to law, did depose and say, that he verily believe that
no warrant or other office right has previously issued for the land above

described, either in his own name or in the name or names of any person or persons under whom he claims the same.

Sworn and subscribed before me, }
 this . . . day of 188 , } [Applicant sign.]
 , J. P. }

NOTE.—If there is no justice of the peace in the township in which the land is situated, the affidavits may be made before a justice of the peace of an adjoining township—in that case the justice should certify that fact.

After the application has been duly prepared, it should be forwarded to the Secretary of Internal Affairs, together with the proper amount of purchase money and warrant fee. The applicant must then give at least thirty days' notice of the filing of the application with the Secretary of Internal Affairs, with a full description of the land as set forth in the application, by publication once a week, for three successive weeks, in one or more newspapers of the county in which the land is situated and nearest its location: and furnish proof that such notice has been given before a warrant can be issued.

FORM No. 91.

Application for Improved Land.

[When date of Improvement CAN be fixed.]

. of the of in
 the county of appl . . . for
 acres of land, situated in the township of and
 county of adjoining lands of
 on the east,
 on the south,
 on the west, and
 on the north.

To the Secretary of Internal Affairs of }
 the Commonwealth of Pennsylvania. } [Applicant sign.]

. County, ss:

Before me, the subscriber, a justice of the peace, in and for the township of , and county aforesaid, personally came , a disinterested witness, who being sworn according to law, did depose and say, that to his certain knowledge, the land above described has been improved, and that it was first improved A. D. , and not before; that the improvements thereon, in the main, consist of, [*describe the improvements,*] and that [*here state whether there is any one now settled and residing on the land.*]

Sworn and subscribed before me, this }
 . . . day , 188 . } [Witness sign.]

FORM No. 94.

Proof of Notice by Publication of Application for Warrant to Survey Vacant Land.

. County, ss :
 Before me, a justice of the peace, in and for the said county, personally appeared , who, being duly sworn according to law, says that the notice appended, to wit :

 was advertised once a week for three consecutive weeks in the
 published at and that the said
 is a newspaper of the county in which the land applied for is situated and nearest its location, and that the notice first appeared in the issue of said paper on the day of

 Sworn and subscribed before me, this }
 . . day of , 18 . } [Witness sign.]
 , J. P. }

NOTE—Extract of Act of 14th April, 1874, relative to the issuing of Warrants to Survey Vacant Land.

SECTION 3. Every applicant for a warrant to survey vacant land shall, after filing his or their application for such warrant, and depositing the amount of the purchase money and fee with the [Secretary of Internal Affairs,] give at least thirty days' notice of the filing of said application, with a full description of the land as set forth in the application by publication once a week for three successive weeks, in one or more newspapers of the county in which the land is situate, and nearest its location and shall furnish proof that such notice has been given before a warrant shall issue.

FORM No. 95.

Application for Patent when the Present Owner CAN give a complete statement of the Title from the Warrantee, or other person who took out the Office Right.

I,, of in the county, the present owner of acres and perches, and allowance of land, now situated in the township of and county of surveyed on a warrant to, dated the day of, herewith forward the amount of purchase money, interest, and fees due the Commonwealth, and request that a patent shall be issued in name for the said tract.

STATEMENT OF TITLE—

.
.

To the Secretary of Internal Affairs of the }
Commonwealth of Pennsylvania. }

. County, ss :

Before me, the subscriber, a justice of the peace, in and for said county, personally came, the above named applicant , who, being duly sworn according to law, did depose and say, that, to the best of knowledge and belief, the facts set forth in the foregoing application are true; and further, that he do not know of any other person or persons claiming title to the above described land, under the aforesaid warrantee.

Sworn and subscribed before me, this }
. . . day of }
., J. P. }

. County, ss :

Before me, the subscriber, a justice of the peace, in and for said county, personally came, a reputable citizen of the township and county in which the land is situated, for which a patent is asked in the foregoing application, who, being duly sworn according to law, did depose and say, that, to the best of his knowledge and belief, the aforesaid applicant , and those under whom he claim title,

have held the above-described tract of land by peaceable possession, and the exercise of ownership, for more than twenty-one years last past.

Sworn and subscribed before me, this }
 day of }
 , J. P. }

NOTE.—When there is more than one owner of the tract, or when the application is for part only of the original tract, the form can be varied to suit the requirements of the case.

FORM NO. 96.

Application for Patent when the Present owner CANNOT give a complete statement of the Title from the Warrantee or other person who took out the Office Right.

I,, of, in the county of, the present owner of acres and perches, and allowance of land, now situated in the township of, and county of, surveyed on a warrant to dated the day of, herewith forward the amount of purchase money, interest, and fees due the Commonwealth, and request that a patent shall be issued in name for the said tract. And further represent, that owing to the length of time which has elapsed since the warrant was taken out, and the great number of conveyances and assurances in law vesting title to the same unable to give a connected statement of them.

To the Secretary of Internal Affairs of the }
Commonwealth of Pennsylvania. }

. County, ss :

Before me, the subscriber, a justice of the peace, in and for said county, personally came, the above named applicant, who, being duly sworn according to law, did depose and say, that to the best of knowledge and belief, the facts set forth in the forgoing application are true; and further, that he do not know of any other person or persons claiming title to the above described land, under the aforesaid warrantee.

Sworn and subscribed before me, this }

THE METRIC SYSTEM.

[The use of this system of weights and measures was authorized by an act of Congress, approved the 28th day of July, 1866.]

Measures of Length.

Metric denominations and values.		Equivalents in denominations in use.
Myriameter,	10,000 meters,	6.2137 miles.
Kilometer,	1,000 meters,	0.62137 mile, or 3,280 ft. 10 in.
Hectometer,	100 meters,	328. feet 1 inch.
Dekameter,	10 meters,	393.7 inches.
Meter,	1 meter,	39.37 inches.
Decimeter,	1-10 of a meter, . . .	3.937 inches.
Centimeter,	1-100 of a meter, . . .	0.3937 inch.
Millimeter,	1-1000 of a meter, . . .	0.0394 inch.

Measures of Surface.

Metric denominations and values.		Equivalents in denominations in use.
Hectare,	10,000 square meters, . .	2.471 acres.
Are,	100 square meters, . .	119.6 square yards.
Centare,	1 square meter, . .	1550. square inches.

Measures of Capacity.

Metric denominations and values.			Equivalents in denominations in use.	
Names.	No. of liters.	Cubic measure.	Dry measure.	Liquid or wine measure.
Kiloliter or stere,	1,000	1 cubic meter,	1.308 cubic yards,	264.17 galls.
Hectoliter,	100	1-10 of a cubic meter, . .	2 bu. & 3.35 pecks,	26.417 galls.
Dekaliter,	10	10 cubic decimeters, . .	9.08 quarts,	2.6417 galls.
Liter,	1	1 cubic decimeter, . .	0.908 quart,	1.0567 quarts.
Decileter,	1-10	1-10 of a cubic decimeter,	6.1022 cubic inches,	0.845 gill.
Centileter,	1-100	10 cubic centimeters, . .	0.6102 cubic inch,	0.338 fluid oz.
Milliliter,	1-1000	1 cubic centimeter, . . .	0.061 cubic inch,	0.27 fluid dr.

Weights.

Metric denominations and values.			Equivalents in denomi- nations in use.
Names.	No. of grams.	Weight of what quantity of water at maximum density.	Avoirdupois weight.
Millier or Tonneau,	1,000,000	1 cubic meter,	2204.6 pounds.
Quintal,	100,000	1 hectoliter,	220.46 pounds.
Myriagram,	10,000	10 liters,	22.046 pounds.
Kilogram or Kilo, .	1,000	1 liter,	2.2046 pounds.
Hectogram,	100	1 decaliter,	3.5274 ounces.
Dekagram,	10	10 cubic centimeters, . . .	0.3527 ounce.
Gram,	1	1 cubic centimeter, . . .	15.432 grains.
Decigram,	1-10	1-10 of a cubic centimeter,	1.5432 grains.
Centigram,	1-100	10 cubic millimeters, . . .	0.1543 grain.
Milligram,	1-1000	1 cubic millimeter,	0.0154 grain.

DANIEL BRODHEAD, appointed November 3, 1789, (vice Lukens deceased.)

Do. commissioned May 6, 1791.

SAMUEL COCHRAN, do. April 23, 1800.

ANDREW PORTER, do. April 4, 1809.

RICHARD T. LEECH, (vice Porter, deceased,) December 7, 1813.

JACOB SPANGLER, commissioned February 13, 1818.

SAMUEL COCHRAN, do. May 11, 1821.

GABRIEL HEISTER, do. May 11, 1824.

Do. do. May 10, 1827.

JACOB SPANGLER, do. May 10, 1830.

Do. do. May 10, 1833.

JOHN TAYLOR, do. May 10, 1836.

JACOB SALLADE, do. May 10, 1839.

Do. do. May 10, 1842.

JOHN LAPORTE, do. May 10, 1845.

(Elected under the act of 9th April, 1850.)

J. PORTER BRAWLEY, commissioned 1st Tuesday in May, 1851.

Do. do. 1st Tuesday in May, 1854.

JOHN ROWE, do. 1st Tuesday in May, 1857.

WILLIAM H. KEIM, do. 1st Tuesday in May, 1860.

HENRY SOUTHER, (to fill vacancy, appointed December 27, 1861.)

JAMES P. BARR, commissioned 1st Tuesday in May, 1863.

JACOB M. CAMPBELL, do. 1st Tuesday in May, 1866.

Do. do. 1st Tuesday in May, 1869.

ROBERT B. BEATH, do. 1st Tuesday in May, 1872.

The office of Surveyor General ceased under the provisions of the Constitution of 1873, on the 1st Tuesday of May, 1875, and the duties devolved upon the Secretary of Internal Affairs.

SECRETARIES OF INTERNAL AFFAIRS.

WILLIAM McCANDLESS, commissioned May 4, 1875.
AARON K. DUNKEL, do. May 6, 1879.
J. SIMPSON AFRICA, do. May 1, 1883.

DEPUTY SECRETARIES OF INTERNAL AFFAIRS.

J. SIMPSON AFRICA, commissioned May 4, 1875.
LUCIUS ROGERS, do. June 1, 1879.
J. WILSON GREENLAND, do. May 1, 1883.

Names and Dates of the Erection of the Several Counties of the Commonwealth of Pennsylvania and the Territory from which they were Formed.

The first three counties which were formed, to wit: Philadelphia, Bucks, and Chester, were established at the first settlement of the Province of Pennsylvania.

1. Adams, January 22, 1800, formed of a part of York.
2. Allegheny, September 24, 1788, formed of parts of Westmoreland and Washington.
3. Armstrong, March 12, 1800, formed of parts of Allegheny, Westmoreland, and Lycoming.
4. Beaver, March 12, 1800, formed of parts of Allegheny and Washington.
5. Bedford, March 9, 1771, formed of a part of Cumberland.
6. Berks, March 11, 1752, formed of parts of Philadelphia, Chester, and Lancaster.
7. Blair, February 26, 1846, formed of parts of Huntingdon and Bedford.
8. *Bradford, February 21, 1810, formed of parts of Luzerne and Lycoming.
9. Bucks, one of the three original counties of the Province, 1682.
10. Butler, March 12, 1800, formed of a part of Allegheny.
11. Cambria, March 26, 1804, formed of parts of Huntingdon, Somerset, and Bedford.
12. Cameron, March 29, 1860, formed of parts of Clinton, Elk, McKean, and Potter.
13. Carbon, March 13, 1843, formed of parts of Northampton and Monroe.
14. Centre, February 13, 1800, formed of parts of Mifflin, Northumberland, Lycoming, and Huntingdon.
15. Chester, one of the three original counties of the Province, 1682.
16. Clarion, March 11, 1839, formed of parts of Venango and Armstrong.
17. Clearfield, March 26, 1804, formed of parts of Northumberland, Huntingdon, and Lycoming.
18. Clinton, June 21, 1839, formed of parts of Lycoming and Centre.
19. Columbia, March 22, 1813, formed of a part of Northumberland.
20. Crawford, March 12, 1800, formed of a part of Allegheny.
21. Cumberland, January 27, 1750, formed of a part of Lancaster.
22. Dauphin, March 4, 1785, formed of a part of Lancaster.
23. Delaware, September 26, 1789, formed of a part of Chester.

*Previous to March 24, 1812, this county was called Ontario, but its name was changed to Bradford on that day.

24. Elk, April 18, 1843, formed of parts of Jefferson, Clearfield, and McKean.
25. Erie, March 12, 1800, formed of a part of Allegheny.
26. Fayette, September 26, 1783, formed of a part of Westmoreland.
27. Forest, April 11, 1848, formed of parts of Jefferson and Venango.*
28. Franklin, September 9, 1784, formed of a part of Cumberland.
29. Fulton, April 19, 1850, formed of a part of Bedford.
30. Greene, February 9, 1796, formed of a part of Washington.
31. Huntingdon, September 20, 1787, formed of a part of Bedford.
32. Indiana, March 30, 1803, formed of parts of Westmoreland and Lyeoming.
33. Jefferson, March 26, 1804, formed of a part of Lyeoming.
34. Juniata, March 2, 1831, formed of a part of Mifflin.
35. Lackawanna, August 21, 1878, formed of a part of Luzerne.
36. Lancaster, May 10, 1729, formed of a part of Chester.
37. Lawrence, March 20, 1849, formed of parts of Beaver and Meroer.
38. Lebanon, February 16, 1813, formed of parts of Dauphin and Lancaster.
39. Lehigh, March 6, 1812, formed of a part of Northampton.
40. Luzerne, September 25, 1786, formed of a part of Northumberland.
41. Lycoming, April 13, 1795, formed of a part of Northumberland.
42. McKean, March 26, 1804, formed of a part of Lyeoming.
43. Mercer, March 12, 1800, formed of a part of Allegheny.
44. Mifflin, September 19, 1789, formed of parts of Cumberland and Northumberland.
45. Monroe, April 1, 1836, formed of parts of Northampton and Pike.
46. Montgomery, September 10, 1784, formed of a part of Philadelphia.
47. Montour, May 3, 1850, formed of a part of Columbia.
48. Northampton, March 11, 1752, formed of a part of Bucks.
49. Northumberland, March 21, 1772, formed of parts of Lancaster, Cumberland, Berks, Bedford, and Northampton.
50. Perry, March 22, 1820, formed of a part of Cumberland.
51. Philadelphia, one of the three original counties of the Province, 1682.
52. Pike, March 26, 1814, formed of a part of Wayne.
53. Potter, March 26, 1804, formed of a part of Lycoming.
54. Schuylkill, March 1, 1811, formed of parts of Berks and Northampton.
55. Snyder, March 2, 1855, formed of a part of Union.
56. Somerset, April 17, 1795, formed of a part of Bedford.
57. Sullivan, March 15, 1847, formed of a part of Lycoming.
58. Susquehanna, February 21, 1810, formed of a part of Luzerne.
59. Tioga, March 26, 1804, formed of a part of Lyeoming.
60. Union, March 22, 1813, formed of a part of Northumberland.

* Part of Venango added by act approved October 31, 1866.

61. Venango, March 12, 1800, formed of parts of Allegheny and Lycoming.
62. Warren, March 12, 1800, formed of parts of Allegheny and Lycoming.
63. Wayne, March 21, 1798, formed of a part of Northampton.
64. Washington, March 28, 1781, formed of a part of Westmoreland.
65. Westmoreland, February 26, 1773, formed of a part of Bedford, and in 1785 part of the purchase of 1784 was added thereto.
66. Wyoming, April 4, 1842, formed of a part of Luzerne.
67. York, August 19, 1749, formed of a part of Lancaster.

A TABULAR STATEMENT

Of the population, square miles, and number of acres in the several counties of the Commonwealth of Pennsylvania, with the names of the county towns.

NAMES.	Population 1870.	Population 1880.	Square miles.	Acres.	COUNTY TOWNS.
Adams,	30,315	32,455	531	339,840	Gettysburg.
Allegheny,	262,204	355,869	757	480,480	Pittsburgh.
Armstrong,	43,382	47,641	612	391,280	Kittanning.
Beaver,	36,148	39,605	452	289,280	Beaver.
Bedford,	29,635	34,929	1,003	641,920	Bedford.
Berks,	106,701	122,597	900	576,000	Reading.
Blair,	38,051	52,740	510	326,400	Hollidaysburg.
Bradford,	53,204	58,541	1,162	743,680	Towanda.
Bucks,	64,336	68,656	595	380,800	Doylestown.
Butler,	36,510	52,536	814	520,960	Butler.
Cambria,	36,569	46,811	666	426,240	Ebensburg.
Cameron,	4,273	5,159	381	243,840	Emporium.
Carbon,	28,144	31,923	402	257,280	Mauch Chunk.
Centre,	34,418	37,922	1,227	785,280	Bellefonte.
Chester,	77,805	83,481	763	488,320	West Chester.
Clarion,	26,537	40,328	572	366,080	Clarion.
Clearfield,	25,741	43,408	1,130	723,200	Clearfield.
Clinton,	23,211	26,278	857	548,480	Lock Haven.
Columbia,	28,766	32,409	479	306,560	Bloomsburg.
Crawford,	63,832	68,607	1,005	643,200	Meadville.
Cumberland,	43,912	45,977	554	354,560	Carlisle.
Dauphin,	60,740	76,148	523	334,720	Harrisburg.
Delaware,	39,403	56,101	195	124,800	Media.
Elk,	8,488	12,800	774	495,360	Ridgway.
Erie,	65,973	74,688	772	494,080	Erie.
Fayette,	43,284	58,842	830	531,200	Uniontown.
Forest,	4,010	4,385	431	275,840	Tionesta.
Franklin,	45,365	49,855	756	483,840	Chambersburg.
Fulton,	9,360	10,149	442	282,880	McConnellsburg.
Greene,	25,887	28,273	620	396,800	Waynesburg.
Huntingdon,	31,251	33,954	899	575,360	Huntingdon.
Indiana,	36,138	40,527	828	529,920	Indiana.
Jefferson,	21,656	27,935	646	413,440	Brookville.
Juniata,	17,390	18,227	407	260,480	Mifflintown.
Lackawanna,	71,401	89,269	424	271,360	Scranton.
Lancaster,	121,340	139,447	973	622,720	Lancaster.
Lawrence,	27,298	33,312	376	240,640	New Castle.
Lebanon,	34,096	38,476	354	227,840	Lebanon.

Wyoming,	14,585	15,598	403	237,920	Tunkhannock.
York,	76,134	87,841	921	589,440	York.
Total,	3,521,951	4,282,891	45,086	28,808,443	

NOTE.—The enumeration of 1880 is classified as follows, viz: Males, 2,136,655; females, 2,146,236; native, 3,695,032; foreign, 587,829; white, 4,197,016; colored, 85,535; Chinese, 156; Indians, 184; total, 4,282,891.

 Pennsylvania is situated between 39 deg. 43 min. and 42 deg. north latitude, and 2 deg. 17 min. east, and 3 deg. 31 min. west longitude, from Washington. Its mean length is 280.39 miles; mean breadth, 158.05 miles; its greatest length $302\frac{1}{4}$ miles, and greatest breadth 175 miles and 192 perches.

The latitude of Greenwich is 51 deg. 28 min. 39 sec. north, and the latitude of Washington 38 deg. 53.3 min. The longitude of Philadelphia from Greenwich is 75 deg. 18 min. west, and the longitude of Greenwich from Washington is 77 deg. 00.6 min. east.

The above statement has been taken and calculated from the best charts and tables known and accessible to this Department.

The latitude of the capitol at Harrisburg, as ascertained by recent observations made by the United States Coast Survey, is 40 deg. 15 min. 51 sec.; longitude, 40.3 seconds of time east of Washington, and 5 h. 7 min. 31.8 sec. west of Greenwich.

LIST OF COUNTY SURVEYORS

Whose election or appointment by the Courts has been officially reported to this Department for the term ending first Monday of January, 1884.

York,	Charles H. Fry,	

NOTE.—A certified copy of the oath of office taken and subscribed by each county surveyor must be filed in this Department. The act of the 9th of April, 1850, [P. L. 434,] required the oath to be administered in the court of quarter sessions of the proper county. The Constitution, [Art. VII., section 1,] provides that the oath shall be administered by some person authorized to administer oaths, and be filed in the office of the prothonotary.

* Oath filed in this Department.

† Refuses to serve.

ERRATA.

The following errata were discovered in the "land office" Report of the Secretary of Internal Affairs for 1882 too late for correction in that Report :

Page A. 21 in twenty-second line from the bottom for "eight" read "four," and in twenty-seventh line from the bottom for "southern" read "northern."

PART II.--ASSESSMENTS.

ADAMS

TABULAR STATEMENT for the year *A. D. 1883*, showing the wards, boroughs, and wards, boroughs, and townships, for county and State purposes; also, the amount by the laws of this Commonwealth for all State and county purposes whatever, acts of Assembly, 28th of February, 1835; 11th of June, 1840; 15th of May, 1841,
